3D spheres style with PNG symbols available for download

by abuckley and Jaynya on July 30, 2012

16545229

By Aileen Buckley and Jaynya Richards, Esri Research Cartographers

In our Making Beautiful Maps technical workshop at the 2012 Esri International User Conference, we demonstrated how PNG (Portable Network Graphics format) pictures improve the appearance of picture marker symbology when the symbols are scaled in size. Now you can download a new 3D spheres style that contains picture marker symbols created using PNG files.

ArcGIS 10.1 introduced the ability to use PNG, JPEG (Joint Photographic Experts Group), and GIF (Graphic Interchange Format) file formats in picture symbols. Previously, only BMP (bitmap) and EMF (enhanced metafile format) files could be used, as explained in an earlier blog entry, "Pictures in ArcGIS symbols."

Although EMF vector files also scale well when symbols are resized, PNG symbols are a bit more common and they can easily be created in many software packages. In addition, PNG files are often used for web graphics so they are a great choice for symbology on web maps. PNG, a bitmapped image format, was created to improve on and replace GIF as an image-file format that does not require a patent license and that employs lossless data compression (source: Wikipedia).

Figures 1 and 2 show the difference in symbology when PNG files are used instead of BMP files. These examples are excerpts of a map of census-designated places in the United States. The size of the symbol is proportional to the population of the place. Because the population values range from over eight million to one, these symbols were drawn at a wide range of sizes. Picture marker symbols that used BMP symbols (figure 1) appear pixelated at larger sizes, while symbols with PNG symbols (figure 2) scale beautifully with no pixelated appearance at varying sizes.

Flattening layers into a single raster

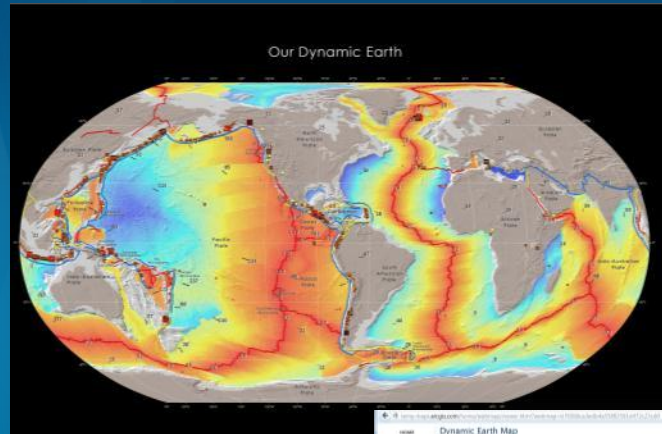

- When it takes a LONG time for the map to draw each time
 - E.g., when editing annotation
- 1. Turn on all layers that you want to display in the raster
- 2. In DATA VIEW > Zoom to the extent that you want the raster to cover
- 3. Export Map
- 4. Use a format that has the option to write a World File
 - BMP, JPEG, PNG, TIF, GIG300
- 5. Set Stretch to None
- **TIP: For higher resolution in the final exported map, use the original layers, not the flattened raster**

Esri Elevation Services

Accessing the services in ArcMap

Accessing the services in ArcMap

The screenshot shows the 'General' dialog box in ArcMap. The 'Server URL' field is highlighted with a red rectangle and contains the text 'http://elevation.arcgisonline.com/arcgis/services'. Below this, the 'ArcGIS Server' and 'Spatial Data Server' URLs are listed. The 'Authentication (Optional)' section contains a 'User Name' field with 'abuckley' and a 'Password' field with masked characters. A red arrow points from the 'Esri Global login' text to the 'User Name' field. The 'Save Username/Password' checkbox is checked. At the bottom, there are three buttons: '< Back', 'Finish', and 'Cancel'.

Open ▼

Description

This service provides a hillshade (shaded relief) surface created from a combination of ground height topography and bathymetry measurements. Ground heights are based on multiple sources. Heights are orthometric (sea level = 0). When possible, the water areas are represented by the best available bathymetry. In the current version, bathymetry data is defined by the GEBCO 08 dataset.

[View item details](#)

Beta Version: These services are currently being provided in Beta form, primarily for testing and feedback. Please provide feedback via Esri's Beta program, beginning at [this link](#).

Data Type Returned by Default: 8 bit unsigned integer, with jpeg compression.

Use for Visualization: Yes. This is appropriate for visualizing the shape and height of the surface at a range of map scales. The image service can be added to applications or maps to enhance a users' contextual understanding.

Use for Analysis: No. The values returned by this service represent a graphic visualization, not measurable values.

Ask.com

This service is provided to enable desktop, web and mobile applications to directly access the elevation data and rendered products. Such applications generally access only a limited geographic extent at a suitable pixel size which will reduce the total data transferred. It is recommended that such applications use compression where possible to reduce bandwidth and decrease data transfer time.

This service is not provided as a primary method to enable the downloading or exporting of data to obtain local copies. For access to the source data, please refer to the web pages of the original data sources listed in the *Source_URL* attribute field.

"Scraping" or any systematic downloading or exporting of the data is prohibited.

Redistribution of downloaded or exported data is prohibited.

For full details of limitations of use please refer to Terms of Use below.

Limited exporting of data from this service is allowed. Examples of valid use are downloading or exporting a small section of data for use in an analysis or as the DTM for use in orthorectification of imagery.

No more than 1 GigaPixels per day may be downloaded or exported.

1 GigaPixel is equivalent to approximately 60 tiles of 4000x4000 pixels.

This work is licensed under the Web Services and API Terms of Use.

The image shows a web browser window displaying the ArcGIS online map viewer. The URL in the address bar is temp.maps.arcgis.com/home/webmap/viewer.html?useExisting=1. The page has a header with 'HOME' and 'My Map' tabs, and navigation links for 'New Map', 'My Content', 'Help', and 'Sign Out'. Below the header is a toolbar with icons for 'Details', 'Add', 'Basemap', 'Save', 'Share', 'Print', 'Measure', and 'Bookmarks', along with a search bar labeled 'Find address or place'. On the left side, there is a 'Contents' panel with a red box highlighting the 'TopoBathyHillshade' layer. The main map area displays a grayscale topographic map of North America, showing elevation and bathymetry. A scale bar at the bottom left indicates distances of 0, 500, and 1000 miles. The Esri logo is visible in the bottom right corner of the map area. The browser's address bar shows 'Ask.com' as the search engine.

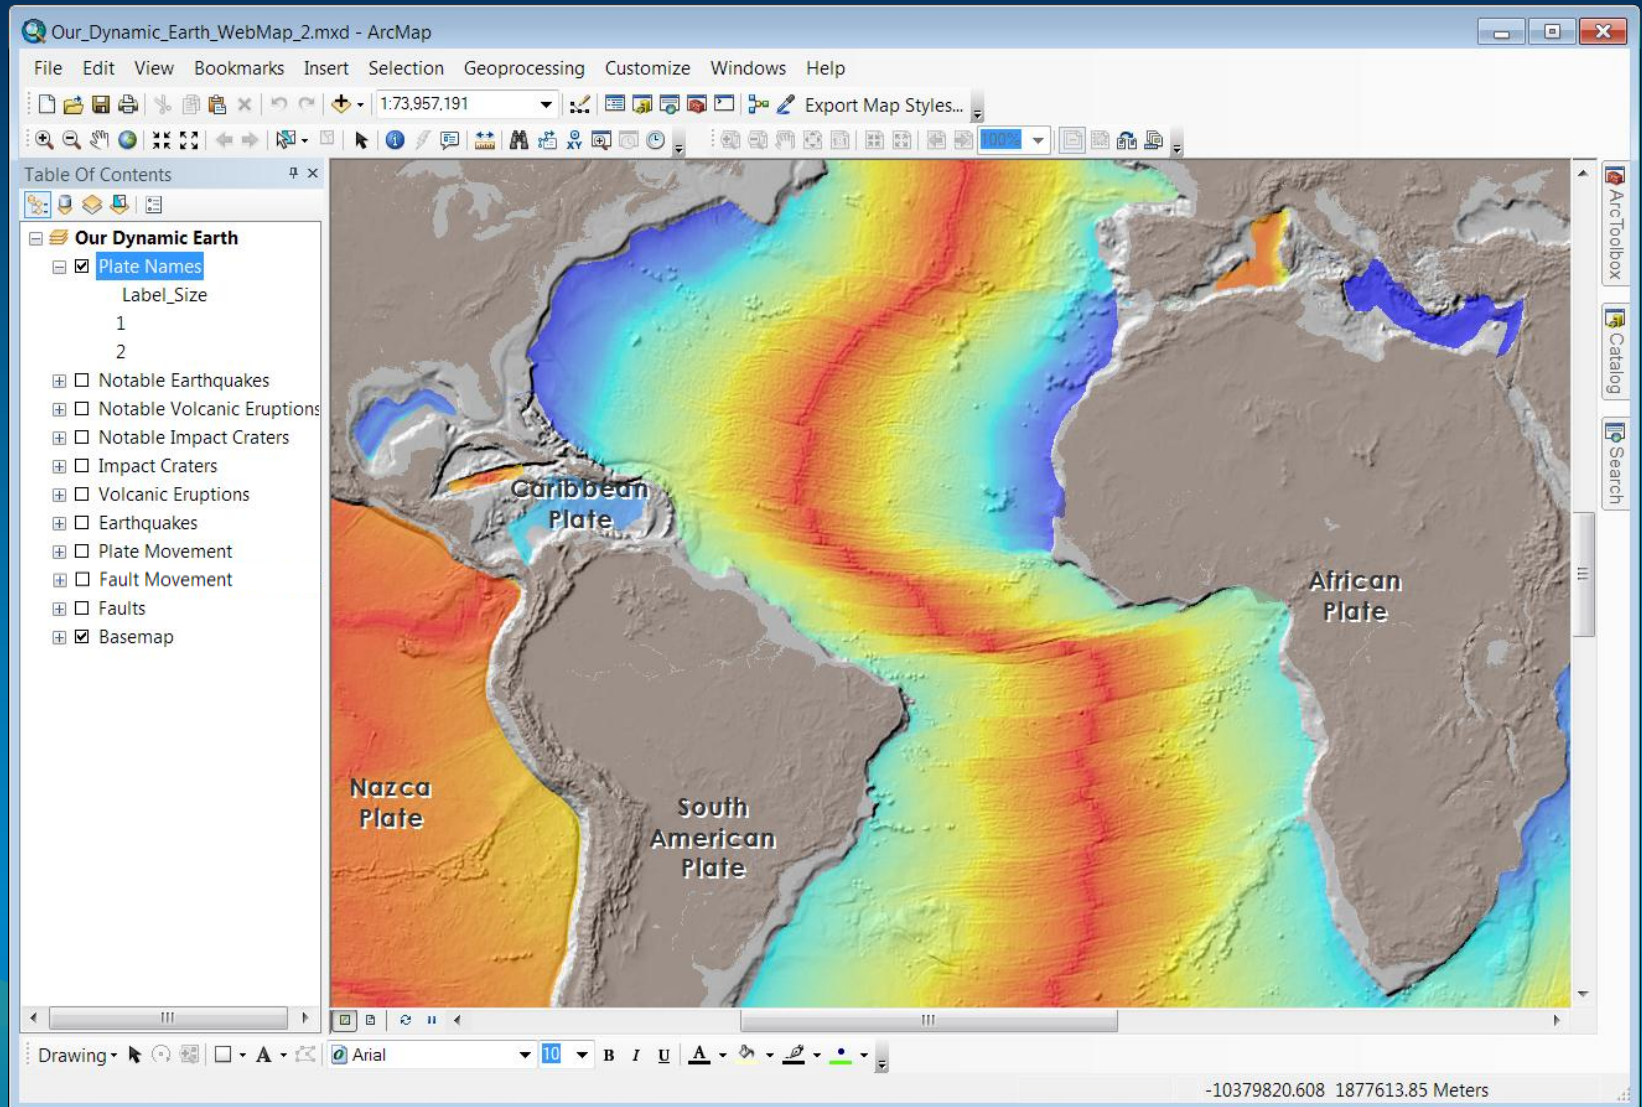

Tips and tricks

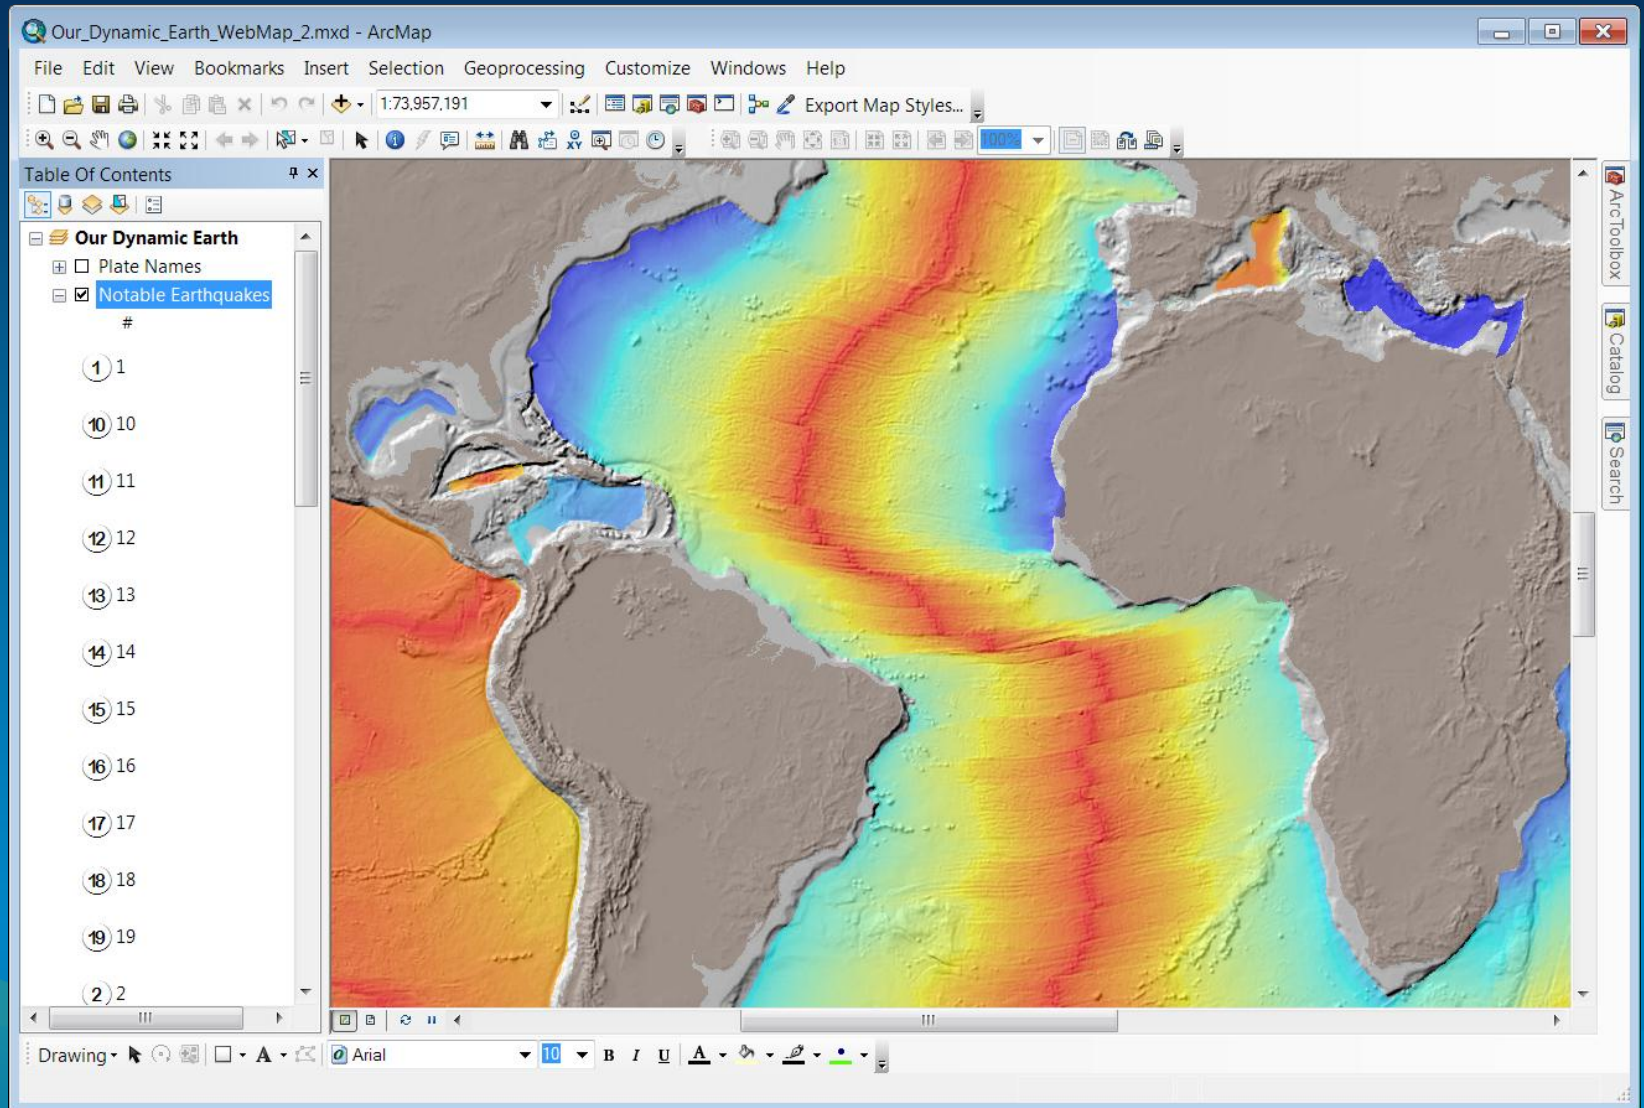

- Using the Esri World Elevation Services
- Complex point and line symbols
- Text
- Documenting the AGO content item
- Configuring the web map app

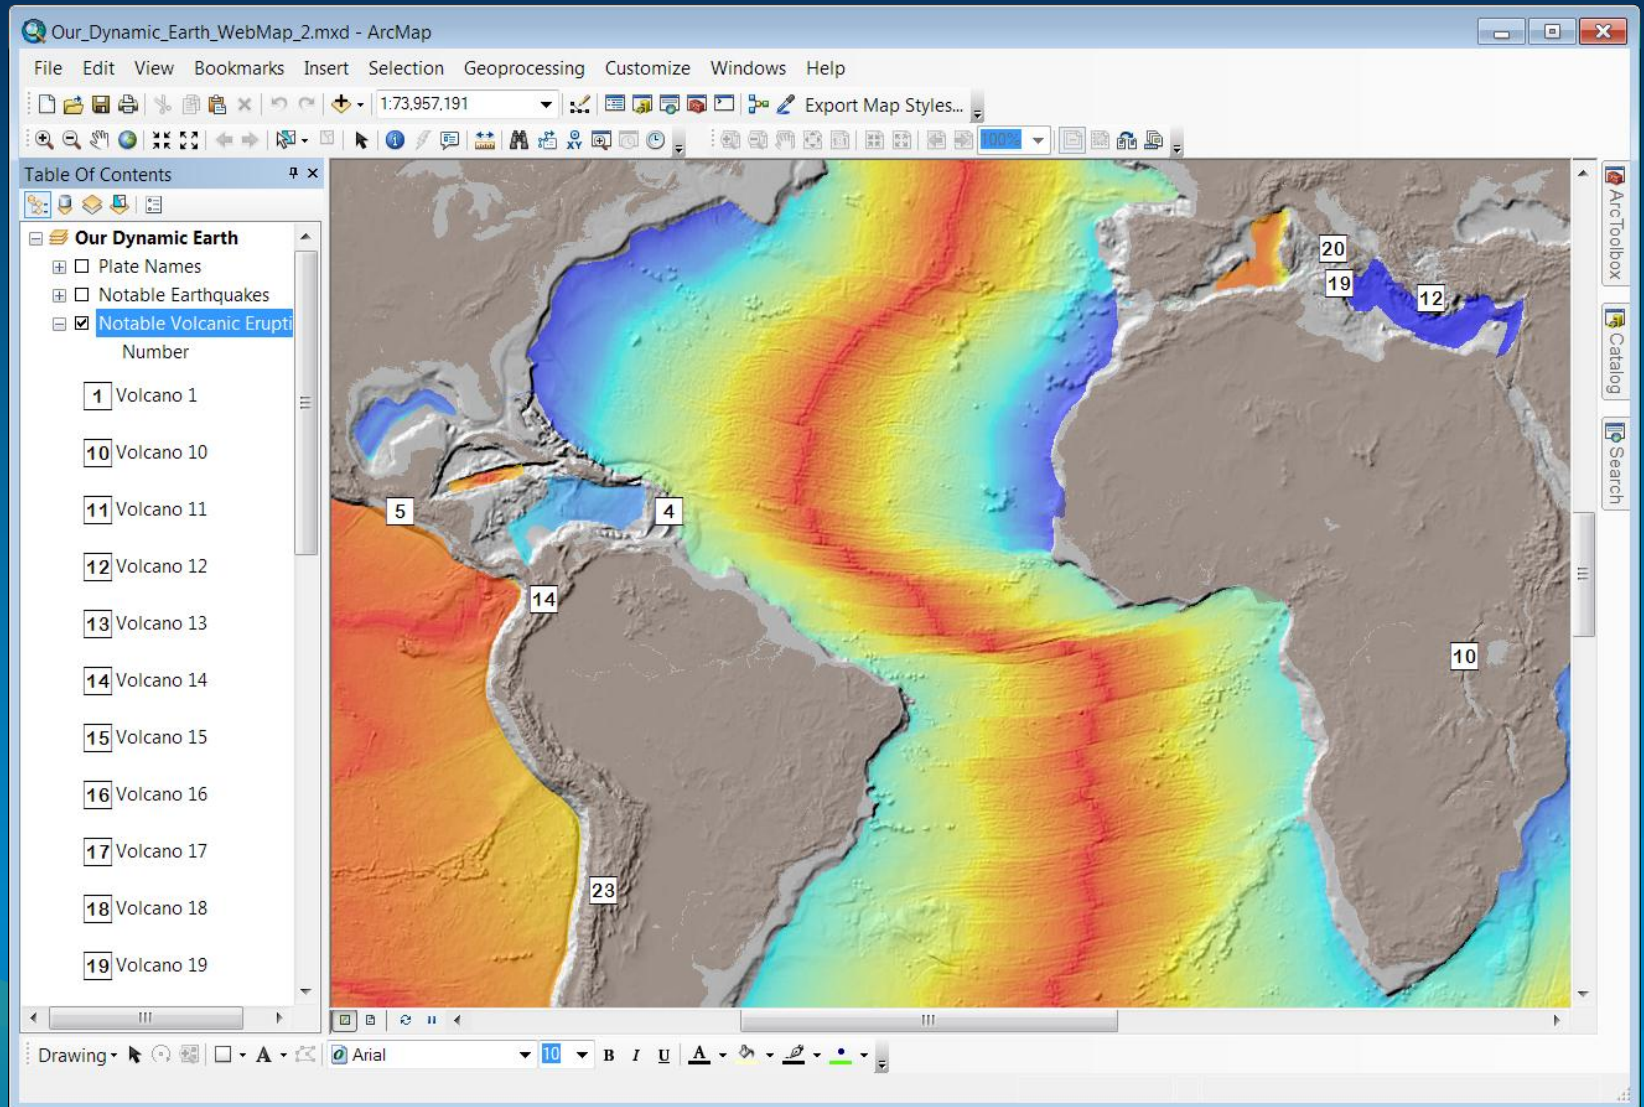

Demo

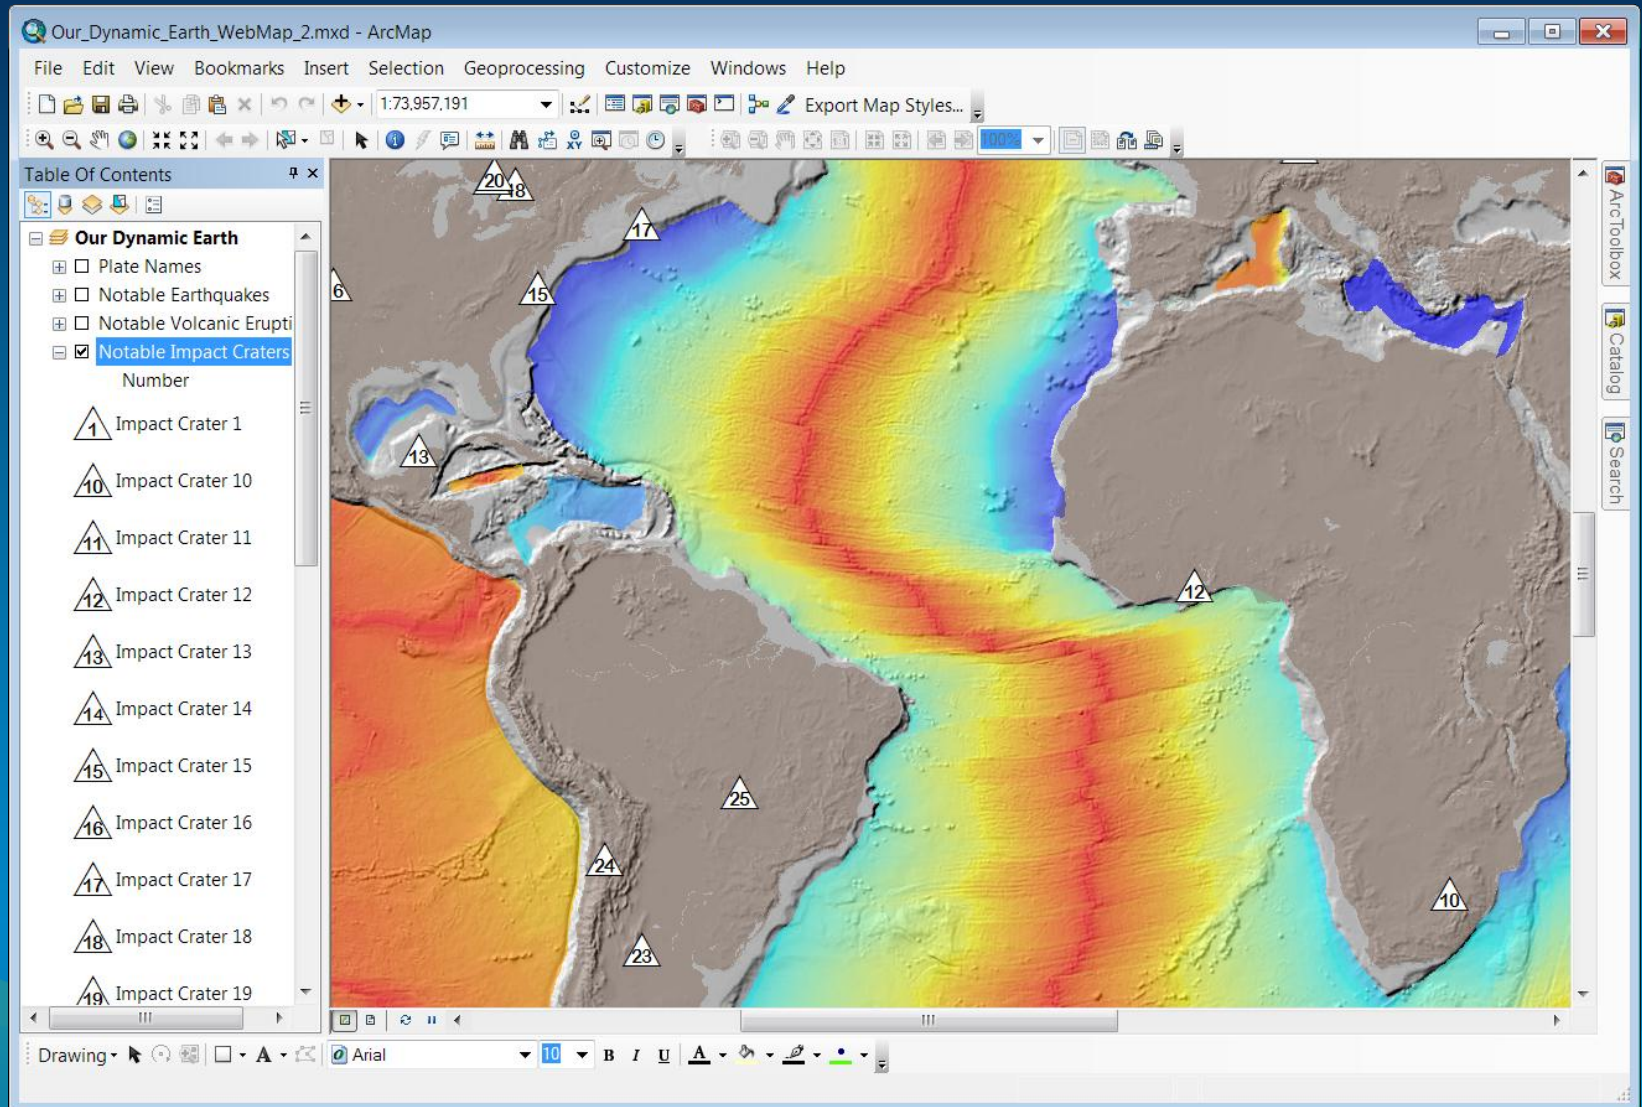

Dynamic Earth
Notable Impact Craters

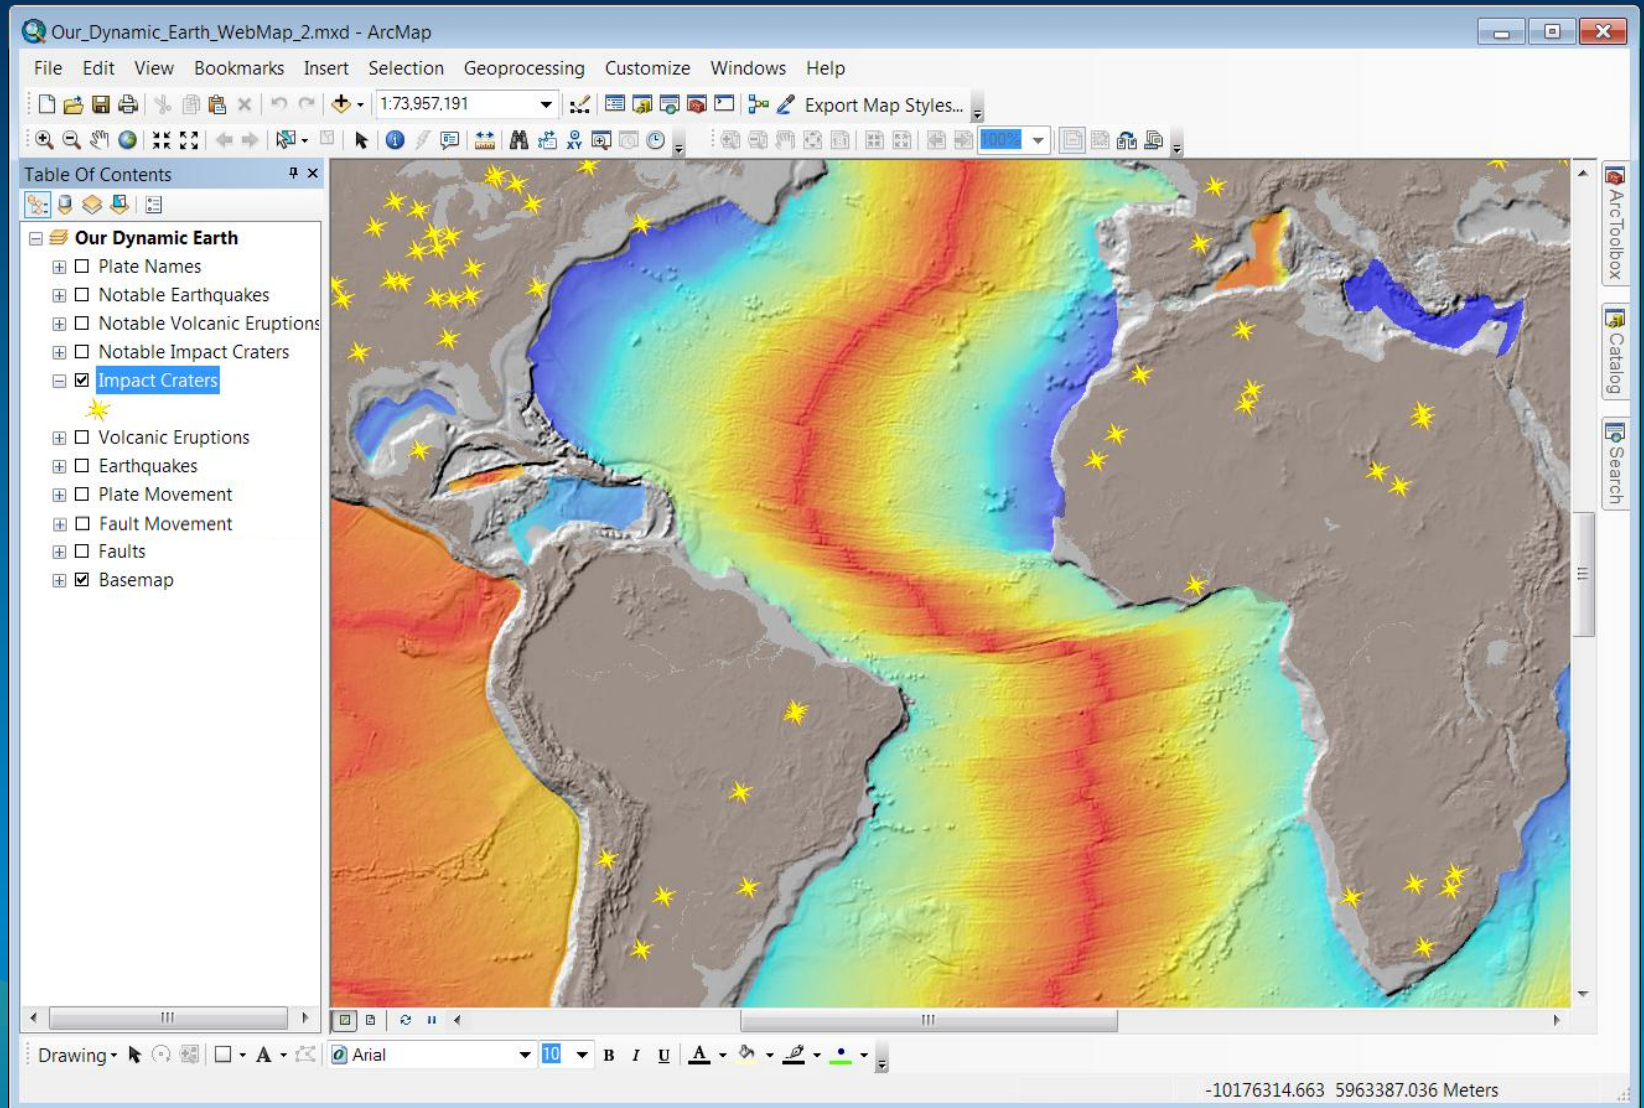

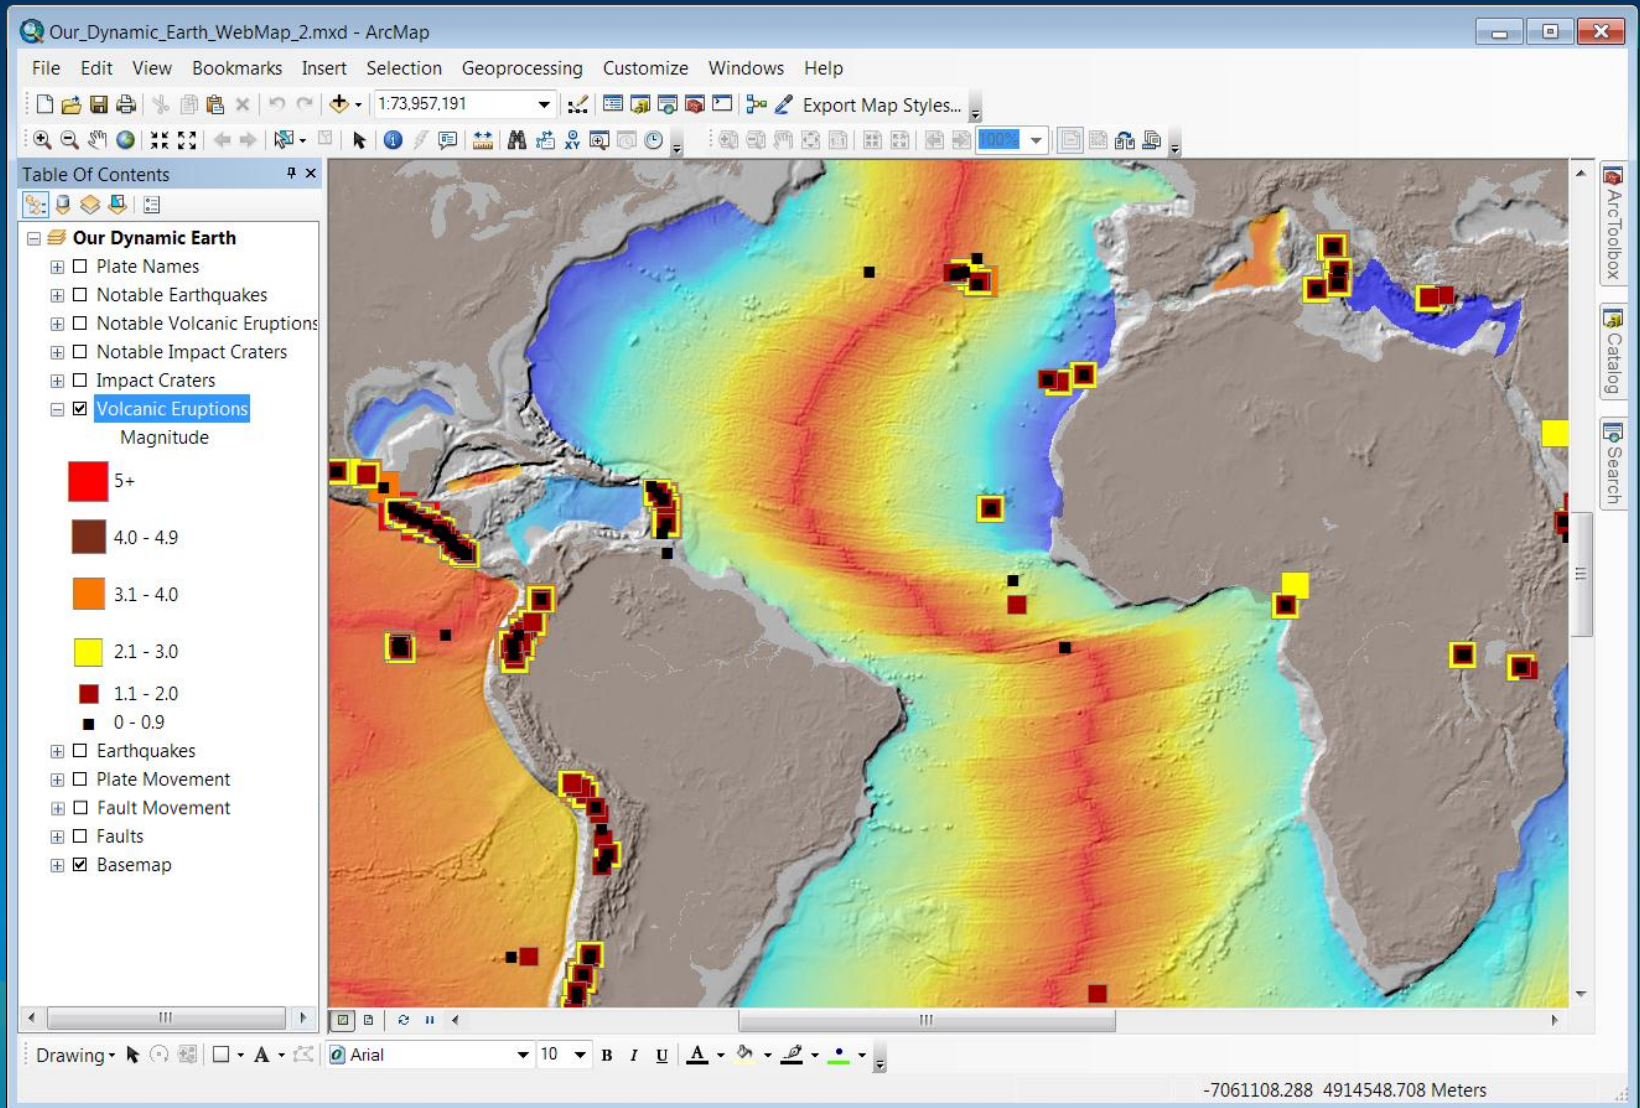

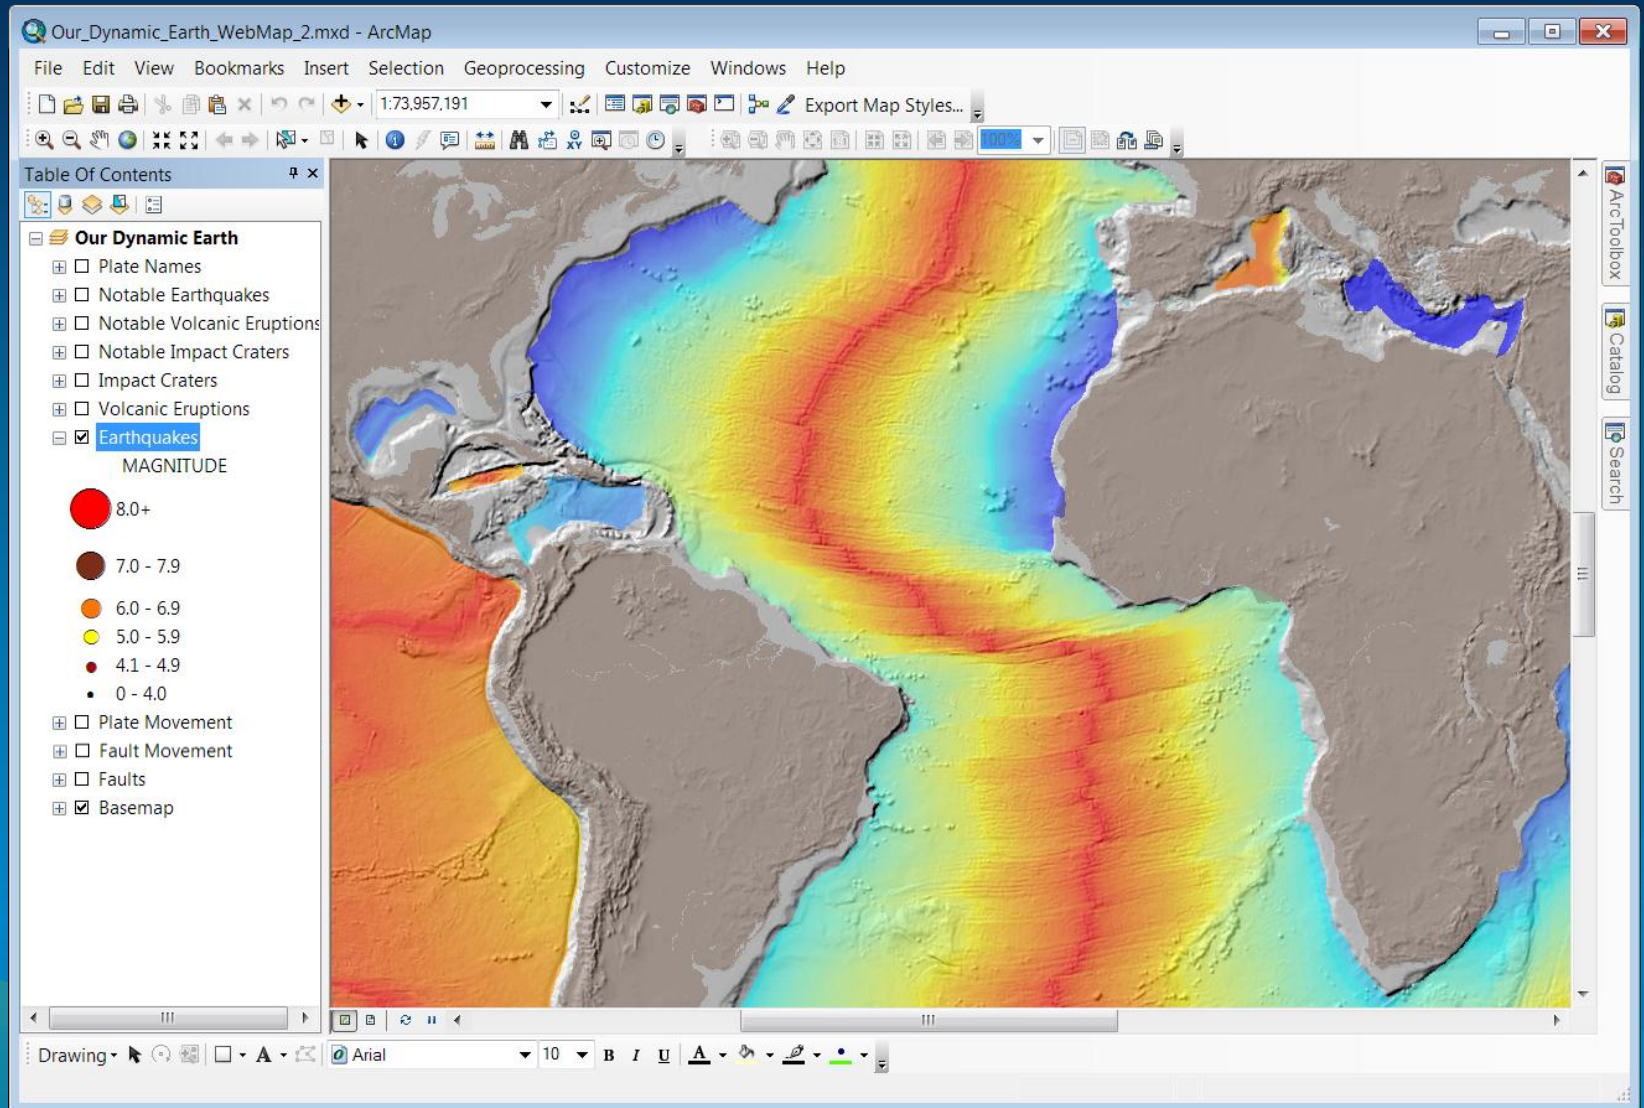

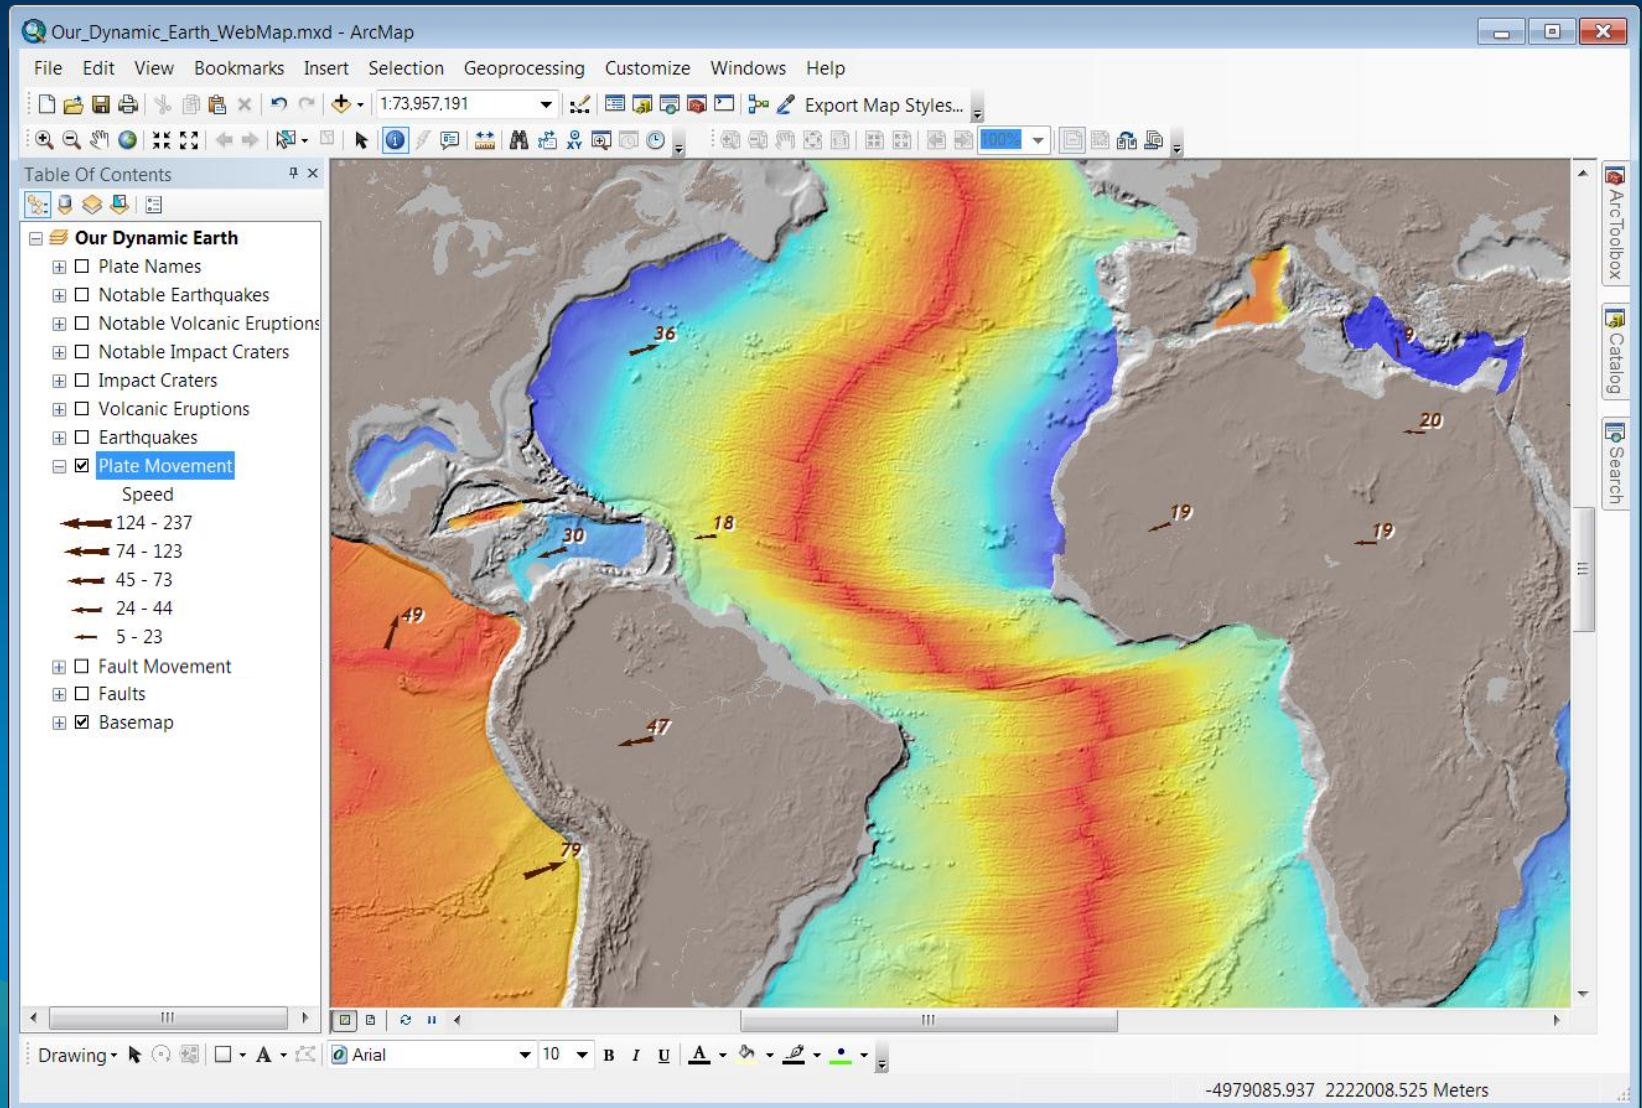

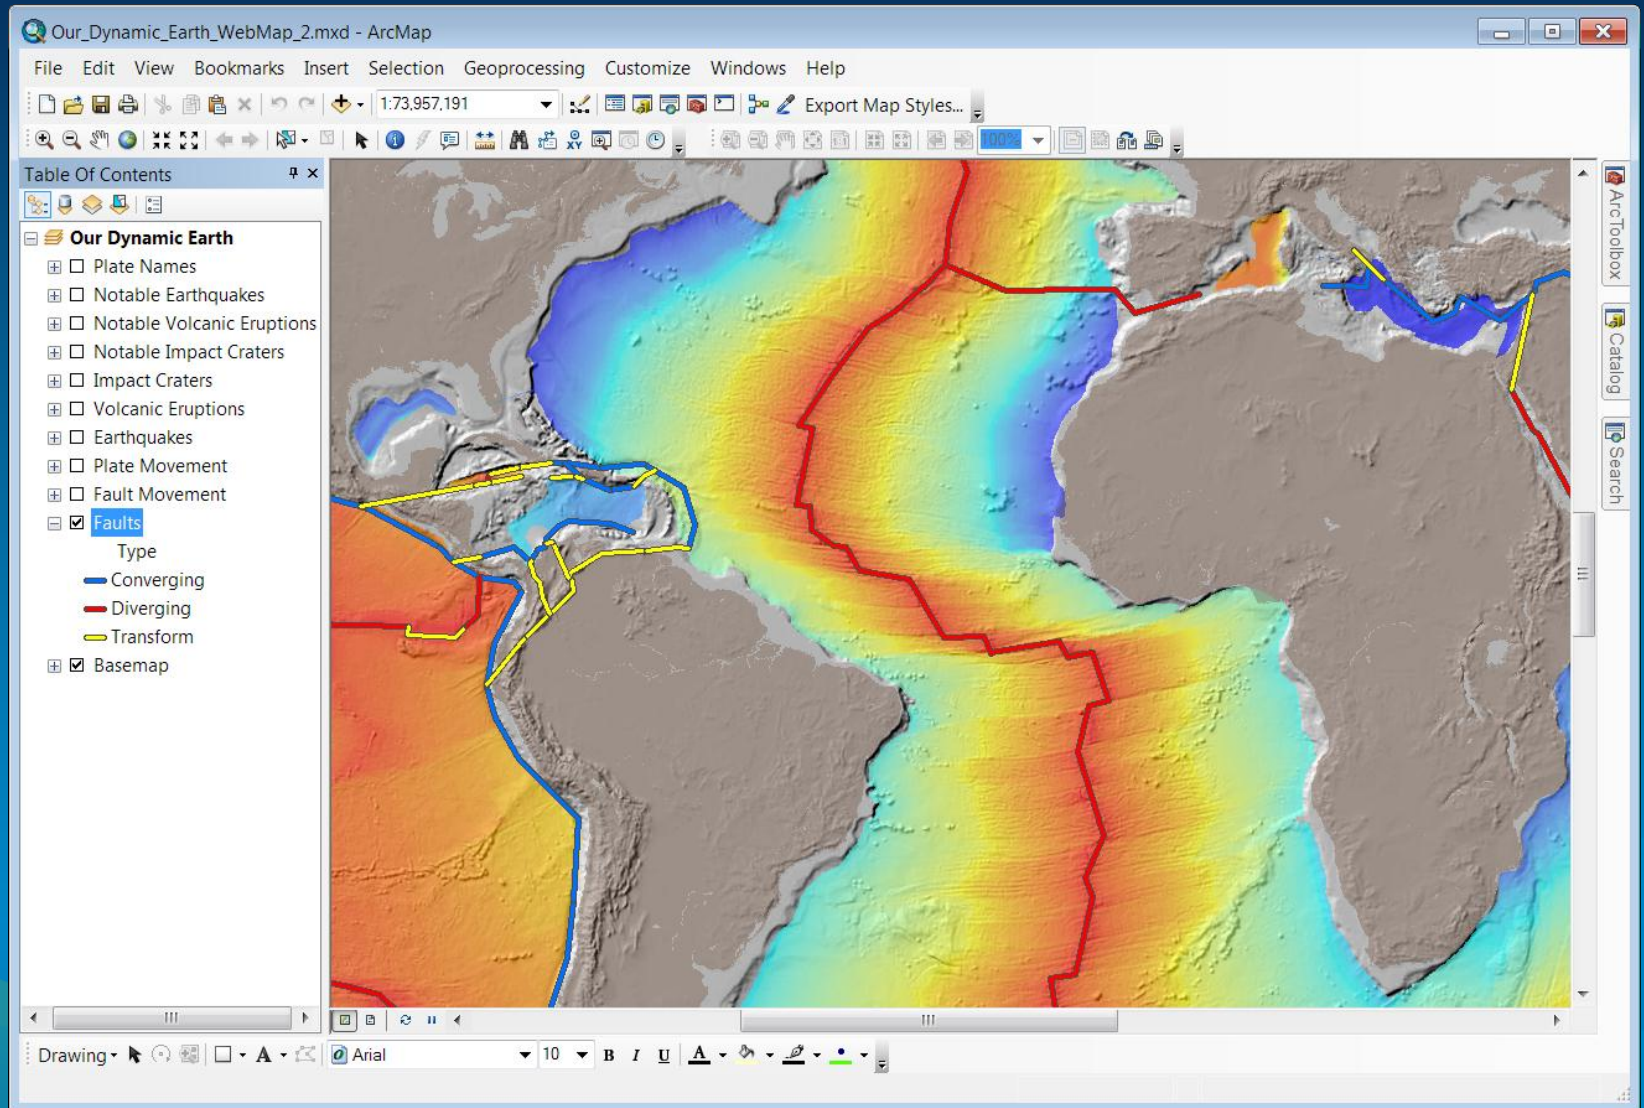

Complex point and line symbols

- Cased line symbols for faults
- Character marker symbols for plate motion vectors
- Character marker symbols for notable events
- Variation in methods
 - When sharing to ArcGIS subscription account
 - When sharing to a server

Text

- Top layers on the print map, but bottom layers on the web map
 - Tiled map services are placed under feature services
- Share the feature services to a server

Documenting the AGO web map

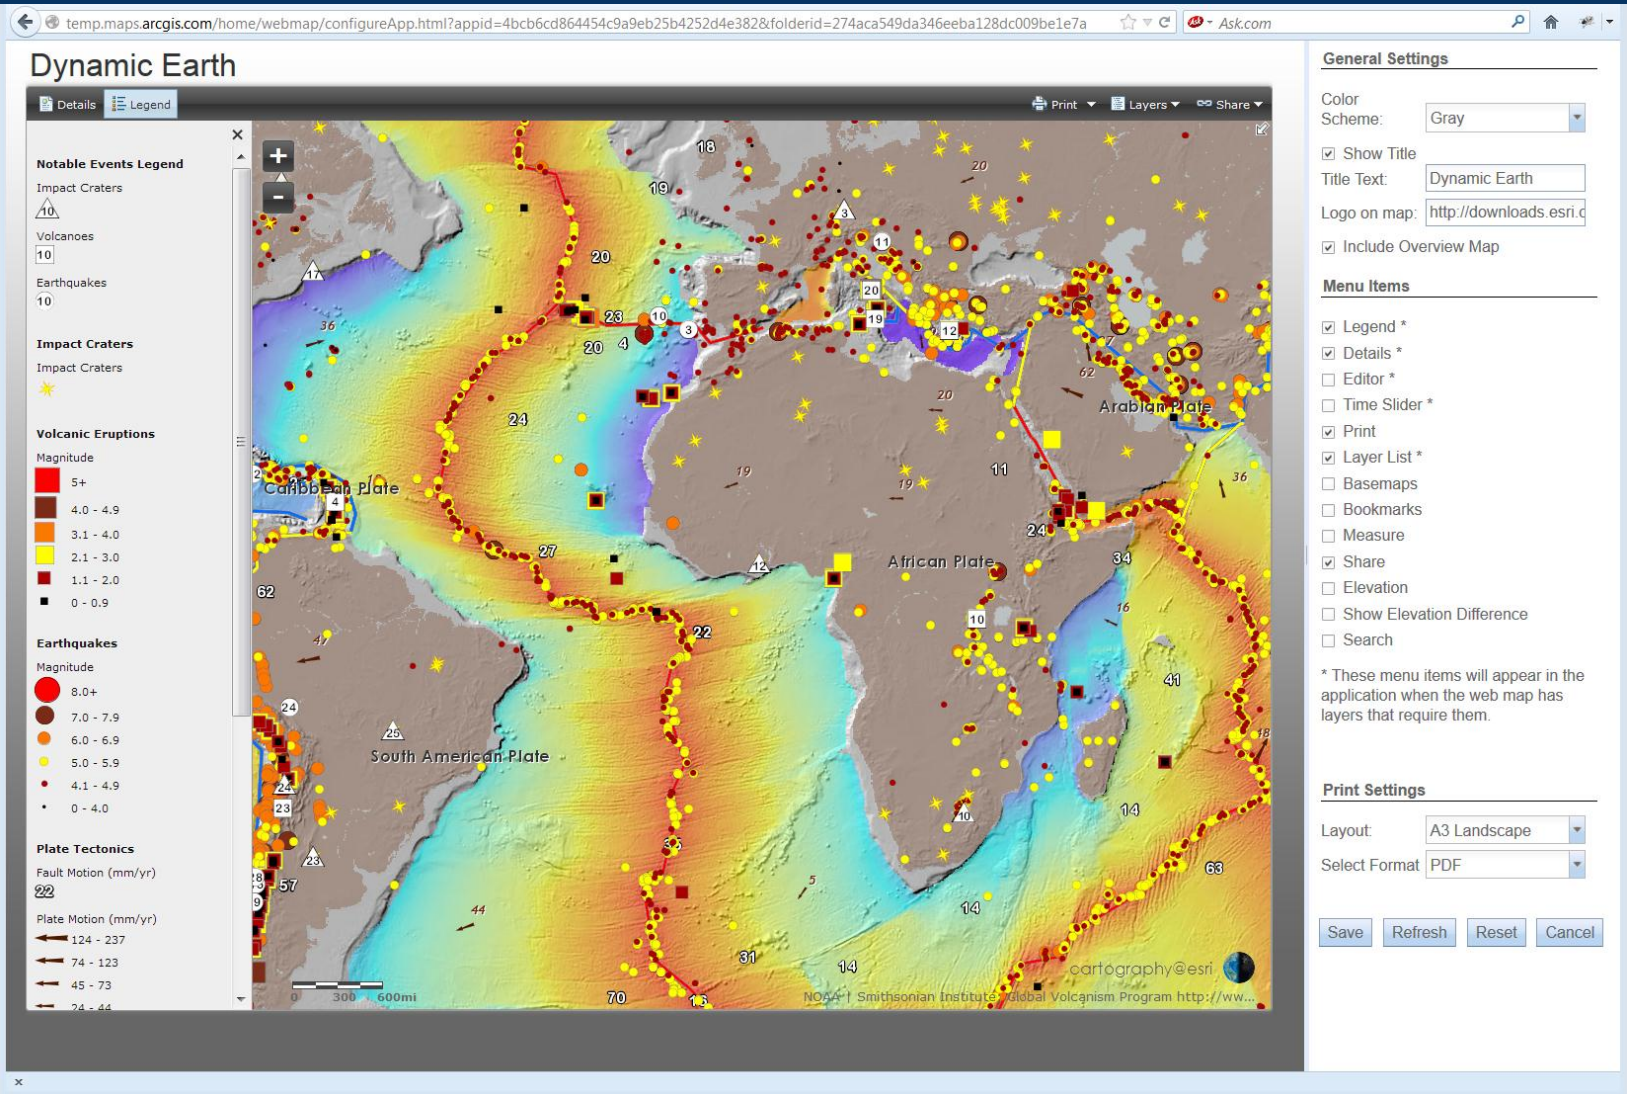

- The AGO content item helps populate the web map
 - Name
 - Summary
- Update the thumbnail
- Use Word doc to copy and paste content
 - Keeps hyperlinks
- Picture images must be on a server

Compiling the web map

- Summary comes from the AGO content item
- Names in legend come from AGO content items
- Legend and layers are added
- Popups are configured
- Sometimes need to add layers just for the legend
- No ability to change
 - Order of tiled versus feature services

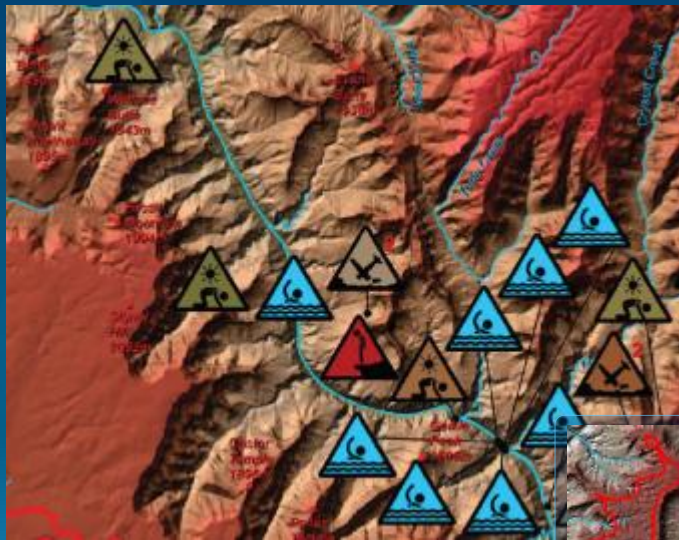

Compiling the web map app

- Details come from the AGO content item
- Legend and layers come from the web map
- Configure app
 - Add title
 - Add logo
 - Saved on a server
 - Select desired application functions
 - No ability to change

OVER THE EDGE IN 3D DEATH IN GRAND CANYON

THE COMPLEX AND CONTINUOUS HISTORY OF GRAND CANYON UNDERSTOOD - PART 1 OF 2

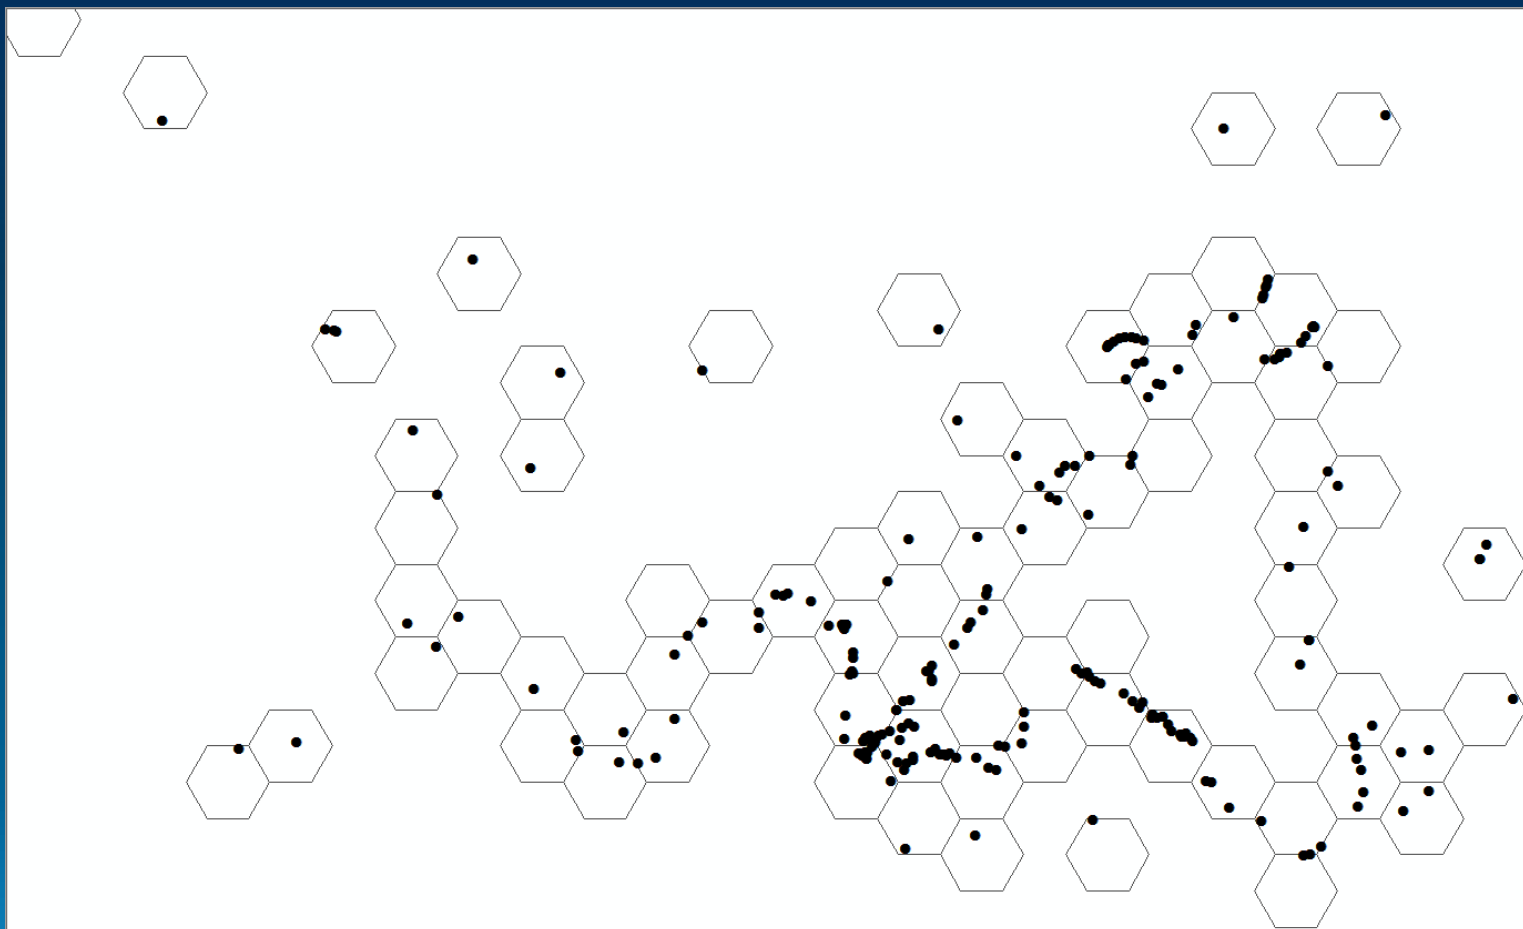

The Grand Canyon is a vast, deep, and complex landscape. It is a place of great beauty and wonder, and it is also a place of great danger. The canyon is a place where the earth's crust is constantly being reshaped, and it is a place where the forces of nature are constantly at work. The canyon is a place where the past is always present, and it is a place where the future is always uncertain.
