

Quick Start Guide

Data Appliance for ArcGIS®
Data Collection Update for Windows®
ArcGIS Server 10 6.0

Overview

The purpose of the Quick Start Guide is to step you quickly and easily through the update of a Data Appliance 6.0 collection. This Quick Start Guide is for use with ArcGIS® Server 10 SP5. The update consists of the following steps:

- Step 1** Unpack the Components
- Step 2** Delete ArcGIS Services
- Step 3** Shut Down Data Appliance for ArcGIS
- Step 4** Remove Old/Install New Data Collection
- Step 5** Power On Data Appliance for ArcGIS
- Step 6** Verify New Data Collection
- Step 6a** Assemble Import Disks
- Step 7** Create Shares
- Step 8** Configure ArcGIS Server to Use Cache Directory
- Step 9** Add Services
- Step 10** Use Services

Before Starting

ArcGIS Server 10 SP5 or higher is required for Data Appliance 6.0 for ArcGIS. If you are using ArcGIS Server 10 and do not plan to upgrade to 10.1 or 10.2, Esri recommends you upgrade to 10 SP5 prior to installing your collection. If you are planning to upgrade to or are already using ArcGIS 10.1 or 10.2 for Server, please refer to the Quick Start Guide Data Appliance for ArcGIS 10.1 or 10.2 Data Collection Update for Windows. Services for Data Appliance for ArcGIS data collections installed on your Data Appliance for ArcGIS server will be unavailable during the installation process. This update should take approximately two hours to complete.

Important: It is imperative that care and precautions be taken when handling the data collection hard drives. The hard drives are sensitive to shock as well as electrostatic discharge. Make sure precautions are taken to eliminate any built-up static. The use of a grounding strap is highly recommended while handling the hard drives.

1 Unpack the Components

Your shipment contains one of the following Data Appliance for ArcGIS collections: World Premier Collection, World Small-Scale Collection or North America Collection; a collection consists of two or more drives. Each drive is labeled with the collection name and version.

2 Delete ArcGIS Services

To update Data Appliance for ArcGIS data collections, ArcGIS services that utilize Data Appliance 5.1 services must be deleted from ArcGIS Server before you disconnect Data Appliance 5.1.

- A. Log in to ArcGIS Server using the Data Appliance for ArcGIS data account with administrative privileges.
- B. Start ArcGIS Server Manager and log in using your account.
- C. Click the **Services** tab.
- D. Select the services to delete by placing a check in the check box for each service.
- E. Optionally, pause the services by clicking **Pause**. After you do this, check the check boxes again.
- F. Click **Delete**. The services are deleted from your server.

Map Services	Globe Services	Geocode Services
DeLorme_World_Base_Map	ESRI_Elevation_World	ESRI_Places_World
NatGeo_World_Map	USGS_Elevation_US	
Ocean_Basemap		
USA_Topo_Maps		
World_Boundaries_and_Places		
World_Boundaries_and_Places_Alternate		
World_Imagery		
World_Light_Gray_Base		
World_Light_Gray_Reference		
World_Physical_Map		
World_Shaded_Relief		
World_Street_Map		
World_Topo_Map		
World_Transportation		

3 Shut Down Data Appliance for ArcGIS

Although Data Appliance for ArcGIS has hot-swappable hard drive bays, hot swapping an entire data collection is not supported.

- A. Log in to Data Appliance for ArcGIS using the **Administrator** account.
- B. Click the **Start** menu, expand the **Shutdown** menu, and select **Shut down**.

- C. Allow Data Appliance for ArcGIS to completely shut down.

4 Remove Old/Install New Data Collection

- A. With Data Appliance for ArcGIS powered off, remove the existing data collection hard drives from the Data Appliance for ArcGIS system.
- B. Place the removed hard drives in a secure and static-free location.
- C. Continue removing all hard drives for the collection. Do not leave any hard drive from the old data collection in Data Appliance for ArcGIS.

Depending on the configuration being serviced, use the above illustrations as guides, with 1U on the left and 4U on the right.

With Data Appliance for ArcGIS still powered off, install the new data collection hard drives into Data Appliance for ArcGIS. Note that the new hard drives are labeled as to what collection they belong to as well as the number of drives in the set, for example, World Premier Collection Drive 1 of 28. Each hard disk drive is labeled to match the label for the hard disk drive it should be installed into.

Although it does not matter which slot a drive is installed in, it is recommended that drives be installed in order, starting from the top left, filling in the drive bays across a row, then proceeding to the row below.

- D. Note the label of the hard drive that is to be installed into Data Appliance for ArcGIS to find its position. Make sure all drives from each set are present. If you find that a drive is missing, **immediately stop the installation procedure and contact Cutting Edge Networked Storage technical support**.
- E. Insert the replacement drive tray into the chassis. Make sure to press the drive carrier handle closed until it clicks in place.
- F. Make sure all drives from all the data collections are installed in Data Appliance for ArcGIS.

5 Power On Data Appliance for ArcGIS

To turn on Data Appliance for ArcGIS, press the power button, located on the front of the computer equipment rack.

Note: While booting up, the Windows 2012 Storage Server operating system performs a number of system checks to verify the integrity of the file system. During this time, the hard drive activity LEDs on Data Appliance for ArcGIS will blink. Please do not interrupt the system by powering it off or rebooting it.

6 Verify New Data Collection

Before utilizing the data collection, the health of the RAID arrays must be verified. Data Appliance for ArcGIS ships with the LSI/3ware 3DM2 utility pre-installed. This utility will be used to verify the status of the datasets.

- A. Log in to Data Appliance for ArcGIS as **Administrator**.
- B. From the desktop, locate the **Connect to 3DM2** shortcut.
- C. Double-click **Connect to 3DM2** to start the 3DM2 utility.
- D. Disregard the security warning and click **Continue to website (not recommended)**.
- E. On the **Login** drop-down menu, select **Administrator**.

- F. Enter the password "3ware" and click **Login**.
- G. The 3DM2 summary screen is displayed. Note the Status column.

- H. If the status for all collections is **OK** and green, the arrays are healthy and ready to use. If something other than **OK** is displayed, click **Information** and click **Unit Information**. This displays the status of each RAID array (unit).
 1. If the status is **Verifying**, the datasets are ready to use. (Verify procedures are run on schedules to preemptively correct any errors.)
 2. If the status is **Degraded** or **Offline**, **immediately stop and contact Cutting Edge Networked Storage technical support**.
- I. Click **Logout** to log out of the 3DM2 utility. Once you have logged out, exit the web browser.

6a Assemble Import Disks

This step is required only if you are upgrading to World Premier 6.0 Collection.

After verifying that the two RAID arrays that make up the World Premier 6.0 Collection are healthy, the volume on the two arrays will need to be imported.

- A. Log in to Data Appliance for ArcGIS using the **Administrator** account.
- B. Click the **Start** menu, right-click **Computer**, then select **Manage**.
- C. In Server Manager, expand **Storage** on the left side menu, then click **Disk Management**.
- D. Two new disks are displayed. Each disk has a yellow exclamation mark designating it as a foreign disk. Right-click either disk and select **Import Foreign Disks**.

Assemble Import Disks (continued)

- E. In the Import Foreign Disks dialog box, verify that "2 of 2 Disks" are present and click **OK**.

- F. In the Foreign Disk Volumes dialog box, click **OK**.

- G. The disks are now online.

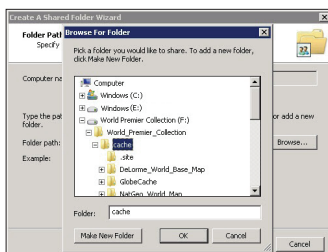

- H. World Premier Collection volume now has a drive letter.

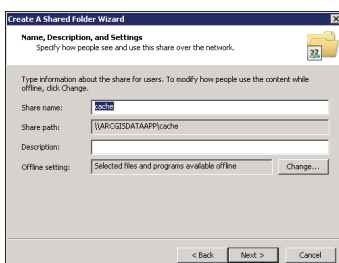

Create Shares

Data Appliance for ArcGIS must be configured to share the data collections.

- Log in to Data Appliance for ArcGIS as **Administrator**.
- Click **Start > Administrative Tools > Computer Management**.
- In the Computer Management application, click **Shared Folders** to expand the tree and right-click the **Shares** folder. Select **New Share**.
- In the Create A Shared Folder Wizard, click **Next** to begin.
- For Folder path, click **Browse** and navigate to the hard drive with the data collection (usually drive E). Select the **cache** folder (or the **source_documents** folder) and click **OK**.

- Click **Next**.
- In the Name, Description, and Settings dialog box, enter the **Share name** for cache or source documents and enter the **Share path** for the appropriate directory.

- Click **Next**.
- Select the **Customize Permissions** option and click **Custom**.
- In the Customize Permissions window, click **Add**.
- Add the following users and groups if needed: Administrator, ArcGISOC, ArcGISOM, and ArcGISWebServices.

- Make sure the permissions for the users and groups are set to Full Control.
- Repeat steps 7C through 7L for the source documents share.

Configure ArcGIS Server to Use Cache Directory

ArcGIS Server 10 maintains a list of directories in which it can find map and globe cache tiles. You need to explicitly add the Data Appliance cache directories to this list.

- Log in to the ArcGIS Server that connects to Data Appliance for ArcGIS using an account with administrative privileges.
- Start ArcGIS Server Manager and log in using your ArcGIS Server account.
- Click the **GIS Server** tab.
- On the **View** menu on the left, click **Server Directories** (or **Directories** if you are using Java Manager).
- Click **Add Directory**.
- For the path to the directory, enter the path to the cache directory on the ArcGIS Data Appliance data collection you made when you created shares, for example, \\ARCgisDATAAPP\cache.
- From the **Type** drop-down list, choose **Cache**.
- Leave **Virtual Directory** blank. You do not need to specify a description, cleaning mode, or maximum file age.
- Click **OK** to add the directory. By default, the list of output directories appears. To verify that the cache directory was created successfully, you can select **Cache Directories** from the **Show** drop-down menu.

Add Services

The following instructions apply to map services. Information about globe services can be found in the help file on the *Data Appliance 6.0 for ArcGIS Help Documentation DVD* by opening `arcgis_data_appliance.pdf`.

- Log in to the ArcGIS Server that connects to Data Appliance for ArcGIS using an account with administrative privileges.
- Start ArcGIS Server Manager and log in using your ArcGIS Server account.
- In ArcGIS Server Manager, select the **Services** tab, then click **Add New Service**.
- In the **Name** field, type the exact name of the corresponding map cache folder on Data Appliance (for example, Ocean_Basemap). The name of the service must match its cache folder name. See the Services Reference Guide for 6.0 at the end of this document for a list of the Data Appliance map services.
- Verify that **Type** is Map Service and **Startup Type** is Automatic. Click **Next**.
- In the **Map Document** field, browse to the `source_documents\map_documents` folder on the data appliance (for example, \\ARCgisDATAAPP\source_documents\map_documents) and select the **map document** that you want to publish.
- In the **Server Cache Directory** field (or **Cache Directory** if you are using Java Manager), select the **cache directory** you added that references the cache directory on Data Appliance for ArcGIS.
- Accept the rest of the default properties and click **Create the service**.
- If necessary, start the service in Manager by checking the check box next to the service name and clicking **Start**.
- Repeat this process for any other map services you want to configure.

Use Services

For specific instructions on how to connect to and use the services, see the appropriate user guide for the ArcGIS application you are using.

Additional information can be found in the help file on the *Data Appliance 6.0 for ArcGIS Help Documentation DVD* by opening `arcgis_data_appliance.pdf`.
