

Esri Demographic Data Release Notes: Belgium

Introduction

The Esri demographic dataset for Belgium provides key population and household attributes for use in a variety of applications. Release notes provide information such as the attribute list, the data's vintage, source, and changes to the dataset. The [methodology](#) document provides additional information regarding methods and definitions.

The existing [ArcGIS Online](#) service and maps for Belgium were updated in March 2016. A more detailed level of geography is now available. The data's vintage is 2013.

Esri demographic datasets are part of the [Living Atlas of the World](#). The Living Atlas is an incredible collection of maps and apps from around the world. It features Esri and user content that can enhance your research and analysis. You too can contribute your maps, apps, and story maps through the [Living Atlas contributor app](#).

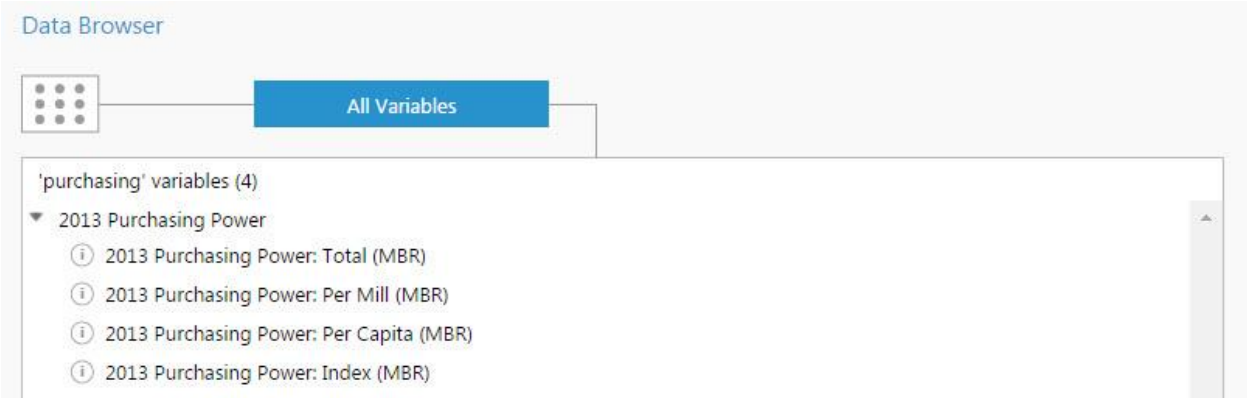

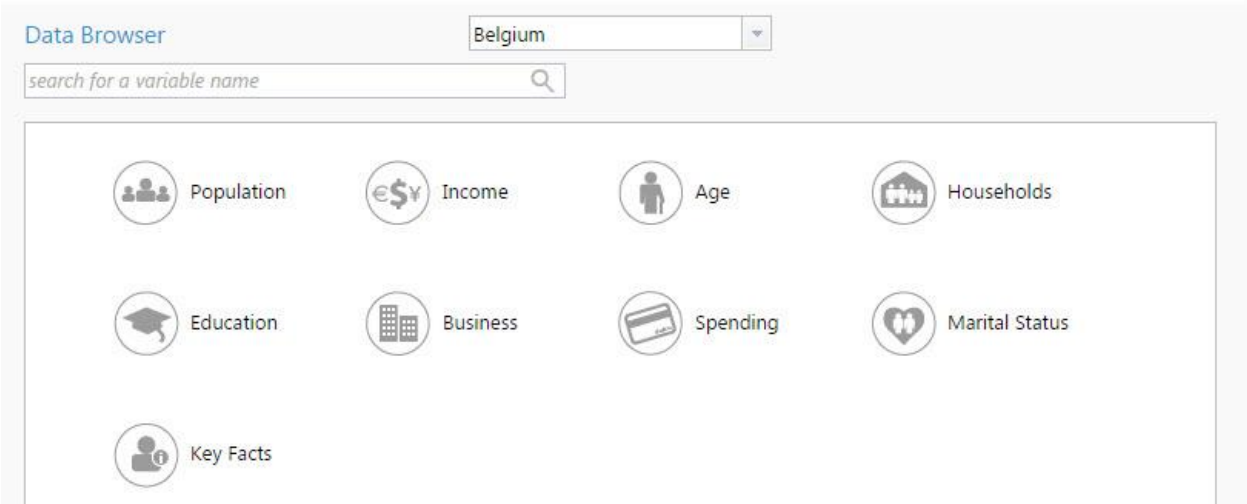

Using Demographic Data

Government agencies use demographic data to provide better services to citizens. Marketers use demographic data to select store locations, target customers, and improve product mix. Utilities use demographic data to understand population changes in their service areas and to plan growth and distribution accordingly.

When you map Esri demographic layers along with your data, you can answer questions such as, Who are my customers? and Where should we open the next store? For example, map your retail locations or offices on top of Esri demographic attributes such as population, age, and purchasing power to understand the local community from a demographic perspective. Once you see the general pattern, Esri products such as [ArcGIS Online](#), [Esri Business Analyst](#), and [Esri Maps for Office](#), can help you find other suitable locations for new stores based on actionable criteria.

Use the [Data Browser](#) in Esri products such as [ArcGIS Online](#), [Esri Business Analyst](#), and [Esri Maps for Office](#) to easily find the attributes you want. Browse by category such as **Age**, or search by **Alias Name**, as shown below and on the next page:

Esri Demographic Data Release Notes: Belgium

Map the attributes you select using the dataset’s features, or create custom analysis areas. Esri products calculate new attribute values and answer questions such as, How many older people live within a five-minute drive of the proposed clinic?

Continue below for additional details regarding the Belgium dataset.

Dataset Information

Belgium	
3 Letter ISO Country code	BEL
Currency	Euro
3 Letter Currency code	EUR
Number of attributes available	128
Number of geography levels	8

Esri Demographic Data Release Notes: Belgium

Geographic Levels and Feature Counts

	Geography Levels Available for Belgium	Geography Levels Available through ArcGIS.com Maps	Feature Count
Country	✓	✓	1
Region	✓	✓	3
Postcode1	✓		9
Province	✓	✓	11
Arrondissement	✓	✓	43
Postcode2	✓		80
Commune	✓	✓	589
Postcode4	✓		1,146

Attribute Lists

Attribute names are unique and consist of no more than 10 characters. Each attribute is paired with an **Alias Name** that describes the attribute. The attribute list is presented twice in the document for your convenience. The first list is ordered by **Category**, with frequently used categories such as **Population** near the top. The second list is ordered alphabetically by **Alias Name**.

Vintage and source are indicated in the **Alias Name** field. The attribute **2013 Total Population (MBR)** is a 2013 attribute from Michael Bauer Research GmbH (MBR). Vintage represents the year for which projections, based on official statistics, were created.

The **Category** field shows the [Data Browser](#) category for each attribute. Use the Data Browser to easily find the attributes you want in products such as [ArcGIS Online](#), [Esri Business Analyst](#), and [Esri Maps for Office](#).

The **Attribute Type** column differentiates between text, count, index, ratio, and median attributes. This information is relevant when performing analysis or building models. Count attributes can easily be aggregated, but other types of attributes, such as medians, should not be aggregated.

Attribute List by Category

This list is ordered by **Category**, with frequently used categories such as **Population** near the top. Note that **NAME** and **ID** are not assigned a category and are not available in the [Data Browser](#).

Attribute Name	Alias Name	Category	Attribute Type
NAME	NAME (The feature's name)		Text
ID	ID (The feature's numerical ID)		Numerical
AVGHHSZ_CY	2013 Average Household Size (MBR)	Households	Ratio
TOTHH_CY	2013 Total Households (MBR)	Households	Count
