

# Esri Demographic Data Release Notes: Estonia

Release: September 2018

## Introduction

The Esri demographic dataset for Estonia provides key population, and household attributes for use in a variety of applications. Release notes provide information such as the attribute list, vintage, source, and changes to the dataset. The [methodology](#) document provides additional information regarding methods and definitions. Refer to the associated csv file for a list of attributes.

The September release includes the following updates to the existing [ArcGIS Online](#) service and maps for Estonia:

- The demographic data's vintage was updated from 2015 to 2017 (with the exception of Unemployed Population which was updated from 2014 to 2016).
- The layer ID schema was updated to match new/removed geographies and generalizations.
- The Settlement Points were updated. Settlement Points are an estimate of likelihood of settlement at low geographic levels (approximately 75m grids). They are used in the aggregation engine (in the GeoEnrichment Service) to apportion and summarize data for both standard and custom areas.
- Data on Households, Population by Sex and Age, Household by Type, Marital Status and Education is based on the per capita values of the respective Municipality/Vallad.
- Data on Unemployed persons is based on the per capita values of the respective Municipality/Vallad.
- Data on Purchasing Power and Consumer Spending is based on the per capita values of the respective Municipality/Vallad.

Esri demographic datasets are part of the [Living Atlas of the World](#). The Living Atlas is an incredible collection of maps and apps from around the world. It features Esri and user content, that can enhance your research and analysis. You too can contribute your maps, apps, and story maps through the [Living Atlas contributor app](#).

## Using Demographic Data

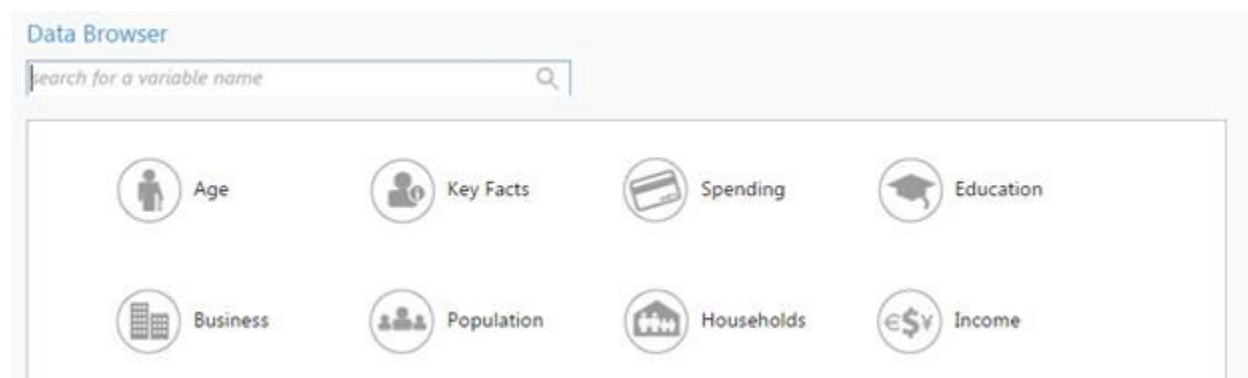

Government agencies use demographic data to provide better services to citizens. Marketers use demographic data to select store locations, target customers, and improve product mix. Utilities use demographic data to understand population changes in their service areas and to plan growth and distribution accordingly.

When you map Esri demographic layers along with your data, you can answer questions such as “who are my customers?” and “where should we open the next store?” For example, map your retail locations or offices on top of Esri demographic attributes such as population, age, and purchasing power, to understand the local community from a demographic perspective. Once you see the general pattern, Esri products such as [ArcGIS Online](#), [Business Analyst](#), and [ArcGIS Maps for Office](#), can help you find other suitable locations for new stores based on actionable criteria.

# Esri Demographic Data Release Notes: Estonia

Release: September 2018

Use the [Data Browser](#) in Esri products such as [ArcGIS Online](#), [Business Analyst](#) and [ArcGIS Maps for Office](#) to easily find the attributes you want. Browse by category such as **Age**, or search by **Alias Name**, as shown below:

Map the attributes you select using the dataset's features, or create your own custom analysis areas. Esri products calculate new attribute values and answer questions such as "How many older people live within a five minute drive of the proposed clinic?"

Continue below for additional details regarding the Estonia dataset.

## Source

Data: © Michael Bauer Research GmbH 2018 based on © Statistics Estonia, Eurostat.

Boundaries: © Michael Bauer Research GmbH, Nuremberg, Germany, 2018. Data Source for Digital Boundaries: 2018 Michael Bauer Research GmbH based on © Statistics Estonia 2012.

## Dataset Information

Estonia	
3 Letter ISO Country code	EST
Currency	Euro
3 Letter Currency code	EUR
Number of attributes available	138
Number of geography levels	6

## Geographic Levels and Feature Counts

	Geography Levels Available for Estonia	Geography Levels Available through ArcGIS.com Maps	Feature Count
<b>Country</b>	X	X	1
<b>Postcodes1</b>	X		9
<b>Counties</b>	X	X	15
<b>Postcodes2</b>	X		50
<b>Municipalities</b>	X	X	213
<b>Postcodes5</b>	X		5370

## Attributes

Refer to the associated csv file for a list of attributes. The following information is included for each attribute:

- Variable ID** Unique variable ID that consists of no more than 10 characters
- Alias Name** Description associated with **Variable ID**.
- Category** Shows the [Data Browser](#) category for each attribute.
- Data Collection** Shows the data collection within the **Category**.
- Field Category** Shows the field category within the **Data Collection**.
- Long Description** Long description associated with Variable ID.
- Year** Vintage represents the year for which projections were created.

## Change Summary

Changes to geography level names

Geography Level	Notes
Postcodes1	Changes in geography names
Counties	Changes in geography names
Postcodes2	Changes in geography names
Municipalities	Changes in geography names; 2 areas removed; 2 new areas
Postcodes5	Changes in geography names; 32 areas removed; 84 new areas

### New Attributes

None.

Attributes no longer available

None.
