Introduction

The Esri demographic dataset for New Zealand provides key population and household attributes for use in a variety of applications. Release notes provide information such as the attribute list, vintage, source, and changes to the dataset. The methodology document provides additional information regarding methods and definitions.

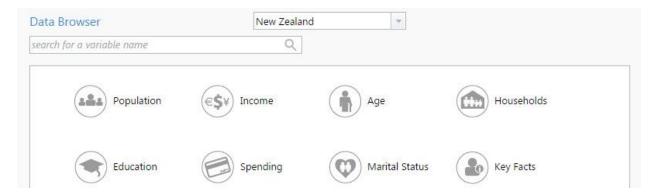

Esri demographic datasets are part of the <u>Living Atlas of the World</u>. The Living Atlas is an incredible collection of maps and apps from around the world. It features Esri and user content, that can enhance your research and analysis. You too can contribute your maps, apps, and story maps through the <u>Living Atlas contributor app</u>.

Using Demographic Data

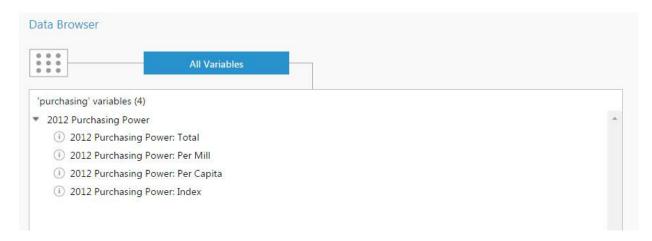

Government agencies use demographic data to provide better services to citizens. Marketers use demographic data to select store locations, target customers, and improve product mix. Utilities use demographic data to understand population changes in their service areas and to plan growth and distribution accordingly.

When you map Esri demographic layers along with your data, you can answer questions such as "who are my customers?" and "where should we open the next store?" For example, map your retail locations or offices on top of Esri demographic attributes such as population, age, and purchasing power, to understand the local community from a demographic perspective. Once you see the general pattern, Esri products such as ArcGIS Online, Business Analyst, and Maps for Office, can help you find other suitable locations for new stores based on actionable criteria.

Use the <u>Data Browser</u> in Esri products such as <u>ArcGIS Online</u>, <u>Business Analyst</u> and <u>Esri Maps for Office</u> to easily find the attributes you want. Browse by category such as **Age**, or search by **Alias Name**, as shown below and on the next page:

© 2015 Esri Phone: 800-292-2224 • www.esri.com Page **1** of **13**

Map the attributes you select using the dataset's features, or create your own custom analysis areas. Esri products calculate new attribute values and answer questions such as "how many older people live within a five minute drive of the proposed clinic?"

Continue below for additional details regarding the New Zealand dataset.

Dataset Information

Ne	ew Zealand
3 Letter ISO Country code	NZL
Currency	New Zealand dollar
3 Letter Currency code	NZD
Number of attributes available	132
Number of geography levels	3

Geographic Levels and Feature Counts

Geography Level Feature (
Region	17
Territorial Authority	68
Area Units	1,911

Attribute Lists

Attribute names are unique and 10 characters or less. Each attribute is paired with an **Alias Name** that describes the attribute. The attribute list is presented twice in the document for your convenience. The first list is ordered by **Category**, with frequently used categories such as **Population** near the top. The second list is ordered alphabetically by **Alias Name**.

© 2015 Esri Phone: 800-292-2224 • www.esri.com Page **2** of **13**

Vintage and source are indicated in the **Alias Name** field. The attribute **2014 Total Population (MBR)** is a 2014 attribute, from Michael Bauer Research GmbH (MBR). Vintage represents the year for which projections, based on official statistics, were created.

The **Category** field shows the <u>Data Browser</u> category for each attribute. Use the Data Browser to easily find the attributes you want in products such as <u>ArcGIS Online</u>, <u>Business Analyst</u> and <u>Esri Maps for Office</u>.

The **Attribute Type** column differentiates between text, count, index, ratio, and median attributes. This information is relevant when performing analysis or building models. Count attributes can easily be aggregated, but other types of attributes such as ratios should not be aggregated.

Attribute list by category

This list is ordered by **Category**, with frequently used categories such as **Population** near the top. Note that **NAME** and **ID** are not assigned a category and are not available in the <u>Data Browser</u>.
