Like the first volume, Women and GIS, Volume 2: Stars of Spatial Science tells how 30 women in different STEM fields applied themselves, overcame obstacles, and used maps, analysis, imagery, and geographic information systems (GIS) to contribute to their professions and the world. From planetary scientists to civil engineers, entrepreneurs to urban planners, the strong, passionate women in this book serve as guiding stars to motivate readers who are developing their own life stories and to inspire their potential to meaningful achievements.
