

Infogroup Business Listing File

 infoUSA.com

Company location: Omaha, Nebraska

Web address: www.infousa.com

Description: Infogroup collects information on approximately 11 million private and public US companies. Individual businesses are located by address geocoding—not all will have an exact location. The Esri geocoder integrates an address-based approach with more than eighty-one million residential and commercial U.S. address records from the NAVTEQ Point Addressing database. This database maps street addresses to a physical location so each address is a fixed point and not an interpolation from an address range. The geocoder uses address locators in a cascading fallback approach to ensure a match for as many records as possible. The primary locator utilizes the NAVTEQ Point Addressing database. The secondary locator utilizes the NAVTEQ Street Address Range database. Records that did not match fall back to the geocode provided by Infogroup.

Businesses can be retrieved by their Standard Industrial Classification Code (SIC) as well as by North American Industry Classification System (NAICS) Code and Location. The Infogroup Business File can be used for locating both competitors and marketing opportunities. This data is current as of July 2011.

Fields:

Note: Using the Identify a Business tool , click on a business in your map area to see these fields for an individual business. Fields marked in blue below are not visible in the business layer attribute table or exportable from Business Analyst.

Company Name (Actual field name=CONAME) – The legal, incorporated business name. Example: ESRI, AT&T, IBM.

Address – Physical address of location. **The address field cannot be used for direct mailing purposes.**

City (CITY16) – City of location.

State (STATE) – State abbreviation of location.

State Name (STATE_NAME) - State name of location.

ZIP Code (ZIP) – Five-digit ZIP code of location.

ZIP plus 4 extension – Four-digit extension to the primary ZIP code, if available.

Phone – Telephone number with area code.

SIC Code (SIC) – The primary SIC code (up to 6-digit).

NAICS Code (NAICS_EXT) - The NAICS Code (up to 8-digit).

Sales Volume/Assets (SALES_VOL) – Estimated sales or assets in thousands of dollars.

Business Status (HDBRCH) – Whether the location is a headquarters, branch, or subsidiary headquarters. If the business is none of these, the field will be blank.

1 Headquarters

2 Branch

3 Subsidiary Headquarters

Employee Count (NUMBER_EMP) – The actual number of employees for the business.

Employee Count Range (EMPSIZ) – A range describing the number of employees for the business.

Range Employees

A 1 - 4
B 5 - 9
C 10 - 19
D 20 - 49
E 50 - 99
F 100 - 249

Range Employees

G 250 - 499
H 500 - 999
I 1,000 - 4,999
J 5,000 - 9,999
K 10,000+

Franchise Status (FRNCOD) – An additional sub-classification of certain SIC codes used to identify franchise/brand affiliation or professional specialty. This field is related to the selected SIC only. See pages 3 - 7 for detailed descriptions of franchise codes.

Industry Status (ISCOD) – A sub-classification of specific SICs such as number of beds in a hospital. This field is related to the selected SIC only.

Square Footage (SQFT) – A range describing the square footage of the business.

A 1 – 2,499

B 2,500 – 9,999

C 10,000 – 39,999

D 40,000+

Subsidiary Parent Number (SUBNUM) – The subsidiary parent number identifies the business as a regional or subsidiary headquarters for a corporate family. The subsidiary will always have an ultimate parent and may or may not have branches assigned to it.

Ultimate Parent Number (ULTNUM) – The ultimate parent number identifies the ultimate corporate parent of the business and also serves as the Infogroup ID (LocNum) for the headquarters site of the ultimate parent. Since all locations of a business have the same ultimate parent number, this field provides 'corporate ownership' linkage information. This information is not collected or maintained for the types of organizations for which ownership is ambiguous. Churches and schools, in particular, are not linked in the file for this reason.

Match Code (MATCH_CODE) - Match codes detail the known qualities about the geocode. A location code has 5 characters. The first character indicates whether the address matched to one or more addresses in the Address Points or Street Address locator, or if the location uses the original infoUSA coordinates. The second character indicates which of the locators the address was matched to, or if using the Infogroup coordinates, whether the coordinates are based off of a street address or a ZIP Code centroid. The third through fifth characters indicate how well the address was matched, if matched to one of the two locators.

1st Character (Status)

M	Record was matched to a locator file
T	Record was matched to a locator file and multiple match candidates had the same score
I	Record used original Infogroup coordinates

2nd Character (Location Type)

A	Address Points Locator: Indicates a match to the NAVTEQ Address Points database. Census ID and latitude/longitude coordinates are accurate to the address level.
S	Street Address Locator: Indicates a match to a street address. Census ID and latitude/longitude coordinates are accurate to the street level.
s	Indicates Infogroup coordinates based off of a street address location
z	Indicates Infogroup coordinates based off of a 5-digit ZIP Code centroid

2nd – 5th Characters (Score)

000-100: The score is a value assigned to all potential candidates of an address match. The match score is based on how well the locations found in the reference data matches with the address data being searched. A score can range from 0-100, 100 being a perfect match. All locations based off of Infogroup coordinates receive a score of 000.

Indexing Code (LOCNUM) - Internal code used for indexing.

Feature type (shape*) – Indicates if the feature is a point, polyline or polygon.
