Change Notes

Market Data are now projections for 2024 (previously 2021). Unemployed Persons are shown for 2023 (previously 2020). Based on official statistics, the number of Unemployed Persons shows a decline due to an economic recovery after the Covid-19 pandemic. The Purchasing Power and Consumer Spending projections for 2024 show a significant upward trend due to extremely high inflation.

The settlement points have been updated from 2019 Esri raster-based points to the 2023 European Commission Global Human Settlement Layer (GHSL) raster points. This data is newer and more detailed than the previous Esri raster-based data. These settlement points are an improvement over the previous version and could result in changes to previously run values in some trade areas. Settlement points are used in the data apportionment algorithm to redistribute data variables to input polygon features.

Other Data Notes

For reasons of data privacy, for areas with less than 10 inhabitants, all given data except Population and Household numbers are anonymized. For these areas, all variables simultaneously referring to currency and population are based on national average, and all other variables are set to zero. Micro: Age and Gender are reported separately, not in combination. Unemployed Persons are based on per capita values of the respective Departamentos. Education is based on the distribution of the respective Departamentos.
