Armenia

Release: November 2022

Change Summary

Changes to geography level names

None.

New Attributes

None.

Attributes no longer available

None.

Change Notes

Market Data are now projections for 2022 (before: 2021). The Purchasing Power projections for 2022 show a significant upward trend due to inflation as well as a low baseline for 2020 caused by Nagorno-Karabakh conflict. Using new input data from the official statistics leads to deviations for Age and Gender.

The settlement points have been updated from the Esri raster-based points to the Worldpop.org raster-based points. The Worldpop.org data uses newer input data than the Esri raster-based data, more information can be found on Worldpop.org. These settlement points are an improvement over the previous version and could result in significant changes to previously run values in some trade areas. Settlement points are used in the data apportionment algorithm to redistribute data variables to input polygon features.

Other Data Notes

None.
