Bosnia and Herzegovina

Release: June 2023

Data Source

Release:	June 2023
Data:	© Michael Bauer Research GmbH 2023 based on © Agencija za statistiku BiH, Eurostat.
Boundaries:	© Michael Bauer Research GmbH, Nuremberg, Germany, 2022.
Settlement Points:	These settlement points were created using the 2022 European Commission Global Human Settlement Layer (GHSL). More information about the data can be found here: https://ghslsys.jrc.ec.europa.eu. The data was verified using the latest Esri imagery and Michael Bauer Research 2021 population.

Dataset Information

Bosnia and Herzegovina	
3 Letter ISO Country code	BIH
Currency	Bosnia and Herzegovina convertible mark
3 Letter Currency code	BAM
Number of attributes available	107
Number of geography levels	6

Geography Levels

Geography Levels	Geography Levels Available for Bosnia and Herzegovina	Available through ArcGIS.com Maps	Feature Count
Country	X	X	1
Postcodes1	X		2
Entities	X	X	3
Postcodes2	X		13
Cantons	X	X	18
Municipalities	X	X	143

Bosnia and Herzegovina

Release: June 2023

Change Summary

Changes to geography level names
None.

New Attributes
None.

Attributes no longer available
None.

Change Notes

Market Data are now projections for 2022 (before: 2021). Unemployed persons are shown for 2021 (before 2020) and due to changes in methodology of the source data there are significant differences. The Purchasing Power projections for 2022 show a downward trend compared to the projections for 2021 due to a downward revision of the Purchasing Power 2021. Consumer Spending in 2022 in Europe shows variations compared to 2021 with shifts within categories due to the lifting of restrictions under the Covid 19 pandemic. Using new input data from the official statistics leads to deviations in Unemployment data. The settlement points have been updated from 2017 Esri raster-based points to the 2022 European Commission Global Human Settlement Layer (GHSL) raster points. This data is newer and more detailed than the previous Esri raster-based data. These settlement points are an improvement over the previous version and could result in changes to previously run values in some trade areas. Settlement points are used in the data apportionment algorithm to redistribute data variables to input polygon features.

Other Data Notes
None.
