Change Notes

Market Data are now projections for 2023 (before: 2022). Unemployed Persons are shown for 2022 (before 2021). The Purchasing Power projections for 2023 show an upward trend due to high inflation. Consumer Spending 2023 shows high deviations from last year's delivery due to high inflation in almost all European countries and significant volatility of the raw data of the official statistical offices in the aftermath of Covid-19 pandemic. Households by Type and Education data are based on a new structure, a comparison is therefore not possible.

The updated settlement points have been constrained using current MBR boundaries. These settlement points could result in minor changes to previously run values in some trade areas. Settlement points are used in the data apportionment algorithm to redistribute data variables to input polygon features.

Other Data Notes

For data privacy, population and household numbers are anonymized for all areas with less than 10 inhabitants. For these areas, all variables referring to currency and population related values are based on national average, all other variables are set to 0.
