Change Notes

Market Data are now projections for 2023 (before: 2021). The Purchasing Power projections for 2023 show a significant nominal increase due to high inflation.

The settlement points have been updated from Worldpop.org raster-based points to newer and more detailed raster-based points. These settlement points are an improvement over the previous version and could result in changes to previously run values in some trade areas. Settlement points are used in the data apportionment algorithm to redistribute data variables to input polygon features.

Other Data Notes

None.
