Settlement Points: These settlement points were created using Finland Nov 2021 Address building centroids points for Housing and Businesses with Housing (www.avoindata.fi/data/en\_GB/dataset/postcodes). The points were constrained to include only residential housing units using Open Street Map Land Use data and Building Footprints. This was verified and improved upon using the latest Esri imagery.

## Change Notes

Market Data are now projections for 2022 (before: 2021). Unemployed persons are shown for 2021 (before 2020). Consumer Spending in 2022 in Europe shows variations compared to 2021 with shifts within categories due to the lifting of restrictions under the Covid 19 pandemic. These settlement points have been constrained to reduce non-residential features and are an improvement over the previous version. This will result in changes to previously run values in some trade areas. Settlement points are used in the data apportionment algorithm to redistribute data variables to input polygon features.

## Other Data Notes

Unemployed persons are based on the per capita values of the respective Kunnat. Education is based on the per capita values of the respective Kunnat. Marital Status is based on the per capita values of the respective Kunnat. For reason of data privacy for areas with less than 10 inhabitants all given data except population and household numbers are anonymized. For these areas all variables referring to currency and at the same time person related values are based on national average, all variables referring to sex and age are based on national distribution and all other variables are set to 0.
