Greenland

Release: June 2023

Data Source

Release:	June 2023
Data:	© Michael Bauer Research GmbH 2023 based on © Statistics Greenland, UN.
Boundaries:	© Michael Bauer Research GmbH, Nuremberg, Germany, 2022. Data Source for Digital Boundaries: 2022 Michael Bauer Research GmbH contains. © the dataset "The coast lines of Greenland" by The Geological Survey of Denmark and Greenland (GEUS). GEUS does not assume any liability in respect of the consequences of the Customer's use of the coast line data. All sources modified and enhanced by Michael Bauer Research GmbH, utilization only with authorization.
Settlement Points:	These settlement points were created using 2023 OpenStreetMap (OSM) Building Footprints. More information about the data can be found here: https://www.openstreetmap.org. The buildings were constrained to include only residential housing units. The buildings were verified and improved upon using the latest Esri imagery and HERE (Esri Street Map Premium Layers (LandArea, BuiltUpArea)). When necessary, household values were distributed evenly onto multiunit residential buildings using a top-down approach with the Michael Bauer Research household values from the lowest level geographies.

Dataset Information

Greenland	
3 Letter ISO Country code	GRL
Currency	Danish krone
3 Letter Currency code	DKK
Number of attributes available	26
Number of geography levels	2

Release: June 2023

Change Summary

Changes to geography level names

None.

New Attributes

None.

Attributes no longer available

None.

Change Notes

Market Data are now projections for 2022 (before: 2021). Using new input data from the official statistics leads to deviations in the Age and Gender data.

The settlement points have been updated from Esri raster-based points to OpenStreetMap residential building footprint centroids. This data is newer and more detailed than the previous Esri raster-based data. These settlement points are an improvement over the previous version and could result in changes to previously run values in some trade areas. Settlement points are used in the data apportionment algorithm to redistribute data variables to input polygon features.

Other Data Notes

None.
