Change Notes

Market Data are now projections for 2022 (before: 2021). Consumer Spending 2022 shows deviations from 2020 with shifts within categories due to the different developments in the Covid-19 pandemic. Using new input data from the official statistics leads to deviations for Age and Gender.

The settlement points have been updated from the Esri raster-based points to Worldpop.org raster-based points that have been constrained using 2022 Esri World Imagery. The Worldpop.org data uses newer input data than the Esri raster-based data, more information can be found on Worldpop.org. These settlement points are based on more recent model inputs and will produce changes to previously run values in some trade areas. In areas of low population density, these changes may be dramatic. Settlement points are used in the data apportionment algorithm to redistribute data variables to input polygon features.
