Change Notes

Market Data are now projections for 2023 (before: 2022). Unemployed Persons are shown for 2022 (before 2021). Not comparable because currency changed from Kuna to Euro. Consumer Spending 2023 shows high deviations from last year's delivery due to high inflation in almost all European countries and significant volatility of the raw data of the official statistical offices in the aftermath of Covid-19 pandemic. Using new input data from the Census 2021 leads to deviations in Age Bands, Marital Status and Households by Type. Education data are based on a new structure, a comparison is therefore not possible. Based on official statistics, the number of Unemployed Persons show a significant decline due to an economic recovery after the Covid-19 pandemic. The new Census 2021 data showed a 5% decline of population compared to former estimates and was included in the new projection for 2023.

No changes were made to these settlement points since the last MBR release.

Other Data Notes

Education, Marital Status and Unemployed Persons are based on per capita values of respective Opine. Household Income and Household Types are based on per household values of respective Opine.
