Change Notes

Market Data are now projections for 2024 (previously 2022). Utilization of updated Census data has led to higher deviations for Marital Status. Consumer Spending for 2024 shows an upward trend due to economic growth and increased consumer spending.

The settlement points have been updated from 2019 Esri raster-based points to the 2023 European Commission Global Human Settlement Layer (GHSL) raster points. This data is newer and more detailed than the previous Esri raster-based data. These settlement points are an improvement over the previous version and could result in changes to previously run values in some trade areas. Settlement points are used in the data apportionment algorithm to redistribute data variables to input polygon features.

Other Data Notes

For reasons of data privacy, for areas with less than 10 inhabitants, all given data except Population and Household numbers are anonymized. For these areas, all variables simultaneously referring to currency and population are based on the national average, and all other variables are set to zero. For Micro level data, Education is based on the distribution of the respective Kabupaten. Marital Status is based on the distribution of the respective Kabupaten.
