## Change Summary

### Changes to geography level names
None.

### New Attributes

| Attribute Name | Alias Name | Category |
|---|---|---|
| EDUC_BASE | 2022 Education Attainment Base | Education |
| MRST_BASE | 2022 Marital Status Base | Marital Status |

### Attributes no longer available
None.

## Change Notes

Market Data are now projections for 2022 (before: 2021). Unemployed persons are shown for 2021 (before 2020). The Purchasing Power projections for 2022 show a positive trend due to rising oil prices. Using new national input data from the official statistics leads to deviations in the variables Age and Gender. 1% national population decrease: new input data of the Kuwait Central Statistical Bureau was included in the new projection for 2022.

The updated settlement points have been constrained using current MBR boundaries. These settlement points could result in minor changes to previously run values in some trade areas. Settlement points are used in the data apportionment algorithm to redistribute data variables to input polygon features.

## Other Data Notes
None.
