Liechtenstein

Release: February 2023

Data source

Release:	February 2023
Data:	© Michael Bauer Research GmbH 2022 based on © Amt für Statistik, UN.
Boundaries:	© Michael Bauer Research GmbH, Nuremberg, Germany, 2022. Data Source for Digital Boundaries: 2022 Michael Bauer Research GmbH based on. © Bundesamt fürr Landestopografie. All sources modified and enhanced by Michael Bauer Research GmbH, utilization only with authorization.
Settlement Points:	These settlement points were created using November 2022 OpenStreetMap (OSM) Building Footprints. The polygons and attributes were constrained, verified and improved upon using the latest Esri imagery, Geonames point data, and Here data (Esri StreetMap Premium Layers). When necessary, Housing Unit values were distributed evenly onto multiunit residential buildings using a top down approach with the MBR Housing Unit values. Esri is a supporter of the OSM project, www.OpenStreetMap.org.

Dataset Information

Liechtenstein	
3 Letter ISO Country code	LIE
Currency	Swiss franc
3 Letter Currency code	CHF
Number of attributes available	130
Number of geography levels	5

Change Summary

Changes to geography level names

None.

New Attributes

None.

Attributes no longer available

None.

Change Notes

Market Data are now projections for 2022 (before: 2021). The Purchasing Power projections for 2022 show a downward trend compared to the projections for 2021 due to a downward revision of the purchasing power 2021. Consumer Spending in 2022 in Europe shows variations compared to 2021 with shifts within categories due to the lifting of restrictions under the Covid 19 pandemic. The settlement points have been updated from the Esri raster-based points to OpenStreetMap (OSM) residential building footprint centroids. The OSM data uses newer input data than the Esri raster-based data and is more accurate. These settlement points are an improvement over the previous version and could result in changes to previously run values in some trade areas. Settlement points are used in the data apportionment algorithm to redistribute data variables to input polygon features.

Other Data Notes

Households by Type are based on the per-household-values of the respective Gemeinden. Education is based on the per-capita-values of the respective Gemeinden. Marital Status is based on the per-capita-values of the respective Gemeinden.
