

# Sri Lanka

Release: November 2022

## Data source

- Release: November 2022
- Data: © Michael Bauer Research GmbH 2022 based on © Department of Census and Statistics, UN.
- Boundaries: © Michael Bauer Research GmbH, Nuremberg, Germany, 2022. Data Source for Digital Boundaries: 2022 Michael Bauer Research GmbH based on. © AmeriGEOSS, CC BY 3.0 IGO. All sources modified and enhanced by Michael Bauer Research GmbH, utilization only with authorization.
- Settlement Points: Vintage = Oct 2017 Nominal Spacing: 75-meters Based on: 2013 MDA BaseVue Land Cover (redelivered by MDA in 2016) 2016 Landsat8 Panchromatic Texture 2016 HERE Road Intersections 2016 GeoNames Populated Places 2016 Vectors

## Dataset Information

Sri Lanka	
3 Letter ISO Country code	LKA
Currency	Sri Lankan rupee
3 Letter Currency code	LKR
Number of attributes available	21
Number of geography levels	4

## Geography Levels

Geography Levels	Geography Levels Available for Sri Lanka	Available through ArcGIS.com Maps	Feature Count
Country	X	X	1
Provinces	X	X	9
Districts	X	X	25
Subdistricts	X	X	331

## Data Apportionment Settings

Learn about [data apportionment](#).

Threshold Upper Bound	Aggregation Method	Level of Geography
150 km	Block Apportion	LK.Subdistricts
more	Centroids In Polygon	LK.Subdistricts

# Sri Lanka

Release: November 2022

## Change Summary

Changes to geography level names

None.

### New Attributes

Attribute Name	Alias Name	Category
MRST_BASE	2022 Marital Status Base	Marital Status

Attributes no longer available

None.

## Change Notes

Market Data are now projections for 2022 (before: 2021). The Purchasing Power projections for 2022 show a significant upward trend due to inflation. The updated settlement points have been constrained using current MBR boundaries. These settlement points could result in minor changes to previously run values in some trade areas. Settlement points are used in the data apportionment algorithm to redistribute data variables to input polygon features.

The updated settlement points have been constrained using current MBR boundaries. These settlement points could result in minor changes to previously run values in some trade areas. Settlement points are used in the data apportionment algorithm to redistribute data variables to input polygon features.

## Other Data Notes

Age and sex are reported separately, not in combination.
