

# Montenegro

Release: June 2024

## Data Source

Release: June 2024  
Data: © Michael Bauer Research GmbH 2024 based on © Monstat, Eurostat.  
Boundaries: © Michael Bauer Research GmbH, Nuremberg, Germany, 2023.  
Settlement Points: These settlement points were created using the 2023 European Commission Global Human Settlement Layer (GHSL). More information about the data can be found here: <https://ghslsys.jrc.ec.europa.eu>. The data was verified using the latest Esri imagery and Michael Bauer Research 2022 population.

## Dataset Information

Montenegro	
3 Letter ISO Country code	MNE
Currency	Euro
3 Letter Currency code	EUR
Number of attributes available	126
Number of geography levels	3

## Geography Levels

Esri Geography Name	Local Geography Name	Available through ArcGIS.com Maps	Feature Count
Country	Montenegro	X	1
Postcodes2	Postcodes2		3
Municipalities	Opstine	X	25

## Data Apportionment Settings

Learn about [data apportionment](#)

Threshold Upper Bound	Aggregation Method	Level of Geography
150 km	Block Apportion	ME.Municipalities
250 km	Centroids In Polygon	ME.Municipalities
more	Centroids In Polygon	ME.Postcodes2

# Montenegro

## Change Summary

Changes to geography level names

None.

New Attributes

None.

Attributes no longer available

None.

## Change Notes

Market Data are now projections for 2023 (before: 2022). Unemployed Persons are shown for 2022 (before 2021). The Purchasing Power projections for 2023 show an upward trend due to high inflation and an upward revision of the 2022 Purchasing Power. Consumer Spending 2023 shows high deviations from last year's delivery due to high inflation in almost all European countries and significant volatility of the raw data of the official statistical offices in the aftermath of Covid-19 pandemic. Based on official statistics, the number of Unemployed Persons shows a significant decline due to an economic recovery after the Covid-19 pandemic.

The settlement points have been updated from 2017 Esri raster-based points to the 2023 European Commission Global Human Settlement Layer (GHSL) raster points. This data is newer and more detailed than the previous Esri raster-based data. These settlement points are an improvement over the previous version and could result in changes to previously run values in some trade areas. Settlement points are used in the data apportionment algorithm to redistribute data variables to input polygon features.

## Other Data Notes

None.
