New Zealand

Release: November 2022

Change Summary

Changes to geography level names
None.

New Attributes

Attribute Name	Alias Name	Category
EDUC_BASE	2021 Education Attainment Base	Education
HTYP_BASE	2021 Households by Type Base	Households
MRST_BASE	2021 Marital Status Base	Marital Status

Attributes no longer available
None.

Change Notes

Market Data are now projections for 2021 (before: 2020). Unemployed persons are shown for 2020 (before 2019). The Purchasing Power projections for 2021 show an upward trend compared to the projections for 2020. Consumer Spending 2021 shows deviations from 2020 with shifts within categories due to the different developments in the Covid-19 pandemic. To further improve our data we have made methodological adjustments within our Households by Income Quintiles. In combination with the current situation due to the Covid-19 pandemic higher deviations may occur. Using new Census data leads to higher deviations in Population and the respective dependent variables. Methodological enhancements as well as new official input data lead to deviations for Households and respective dependent variables.

The settlement points have been updated from the Esri raster-based points to Land Information New Zealand Address Points. These settlement points are an improvement over the previous version and could result in significant changes to previously run values in some trade areas. Settlement points are used in the data apportionment algorithm to redistribute data variables to input polygon features.

Other Data Notes

For reason of data privacy for areas with less than 10 inhabitants all given data except population and household numbers are anonymized. For these areas all variables referring to currency and at the same time person related values are based on national average, all variables referring to sex and age are based on national distribution and all other variables are set to 0.
