Change Notes

Market Data are now projections for 2022 (before: 2021). The Purchasing Power projections for 2022 show a positive trend due to rising oil prices. Using new Census data leads to higher deviations in Population, Households and the respective dependent variables.

The updated settlement points have been constrained using current MBR boundaries. These settlement points could result in minor changes to previously run values in some trade areas. Settlement points are used in the data apportionment algorithm to redistribute data variables to input polygon features. Learn more about how data apportionment works.

Other Data Notes

None.
