Venezuela

Release: November 2022

Change Summary

Changes to geography level names

None.

New Attributes

Attribute Name	Alias Name	Category
EDUC_BASE	2021 Education Attainment Base	Education
HTYP_BASE	2021 Households by Type Base	Households
MRST_BASE	2021 Marital Status Base	Marital Status

Attributes no longer available

None.

Change Notes

Market Data are now projections for 2021 (before: 2020). Unemployed persons are shown for 2020 (before 2019). Given the current situation in Venezuela, there is a sharp decline in purchasing power at national level. In context of the current situation and the sharp decline in purchasing power, we have decided not to report data on household by income groups due to insufficient input data. Using new input data from the official statistics leads to deviations in the variables Age and Gender.

The updated settlement points have been constrained using current MBR boundaries. These settlement points could result in minor changes to previously run values in some trade areas. Settlement points are used in the data apportionment algorithm to redistribute data variables to input polygon features.

Other Data Notes

None.
