

Vietnam

Release: November 2022

Data source

Release: November 2022
Data: © Michael Bauer Research GmbH 2022 based on © General Statistics Office, UN.
Boundaries: © Michael Bauer Research GmbH, Nuremberg, Germany, 2022.
Settlement Points: Vintage = June 2021. Based on WorldPop.org population grid 2020 UN adjusted with HERE Roads and layers, Esri 2018Q3 settlement points for void areas

Dataset Information

Vietnam	
3 Letter ISO Country code	VNM
Currency	Vietnamese đồng
3 Letter Currency code	VND
Number of attributes available	120
Number of geography levels	4

Geography Levels

Geography Levels	Geography Levels Available for Vietnam	Available through ArcGIS.com Maps	Feature Count
Country	X	X	1
Provinces	X	X	63
Districts	X	X	703
Communes	X	X	10602

Release: November 2022

Change Summary

Changes to geography level names

None.

New Attributes

None.

Attributes no longer available

None.

Change Notes

Market Data are now projections for 2022 (before: 2021). The Purchasing Power projections for 2022 show a significant upward trend compared to the projections for 2020. Consumer Spending 2022 shows deviations from 2020 with shifts within categories due to the different developments in the Covid-19 pandemic. Using new Census data leads to higher deviations in Population and the respective dependent variables.

The updated settlement points have been constrained using current MBR boundaries. These settlement points could result in minor changes to previously run values in some trade areas. Settlement points are used in the data apportionment algorithm to redistribute data variables to input polygon features. Learn more about how data apportionment works. Settlement points are used in the data apportionment algorithm to redistribute data variables to input polygon features. Learn more about how data apportionment works.

Other Data Notes

Data on Education is based on the per-capita-values of the respective Huyen. For reason of data privacy for areas with less than 10 inhabitants all given data except population and household numbers are anonymized. For these areas all variables referring to currency and at the same time person related values are based on national average, all variables referring to sex and age are based on national distribution and all other variables are set to 0.
