ESRI Education Solutions

ESRI has a long-standing commitment to quality geographic information system (GIS) education and training. ESRI created and taught its first instructor-led course, *Introduction to ArcInfo,* in 1982. In 1988 ESRI developed an instructor certification program for its international distributors to ensure that the same high-quality instruction and training materials available in the United States were available worldwide. ESRI's *Understanding GIS—The ARC/INFO® Method* was first published in 1991 and became the most widely distributed workbook on GIS ever published. In 1994 ESRI's Authorized Teaching Program enabled qualified individuals in the United States to teach several ESRI® courses. In 1997 ESRI Virtual Campus opened its doors on the World Wide Web offering self-paced GIS education and training worldwide. And in 1998 ESRI Press became an official publishing imprint for GIS books.

Today, ESRI courses and books support hundreds of thousands of GIS students and professionals. ESRI's instructor-led courses are offered at ESRI facilities and at client sites throughout the United States. ESRI Virtual Campus is a leader in GIS education on the Web, making GIS courses and a global GIS learning community accessible to just about anyone with an Internet connection. Books and workbooks on GIS technology and applications from ESRI Press are used in formal university and corporate training programs and are sold by major booksellers everywhere.
