

## ArcWeb USA

*Add rich content and capabilities to ArcGIS Desktop using ArcWeb Services*

ESRI® ArcGIS® users can now easily take advantage of ArcWeb<sup>SM</sup> Services—geographic information system (GIS) Web services from ESRI. ArcWeb USA provides GIS users with a simple way to access up-to-date data and capabilities over the Web. With ArcWeb USA, you can access terabytes of rich content and new capabilities using your ArcGIS Desktop (ArcView®, ArcEditor™, or ArcInfo™) without having to store or maintain data.

### Easy Access to Current Data

By downloading the free ArcWeb toolbar to ArcGIS Desktop, you can access a vast collection of always current data. The toolbar provides access to a sampler of free data as well as the ArcWeb USA package of data and services. Street data, census population data, high-resolution imagery, weather data, topographic data, flood data, and more are right at your fingertips. Best of all, you do not have to store and maintain this data because you access it over the Web. This results in a significant savings of time, expense, and computer resources.

## Available Services

Add to the functionality of your ArcGIS Desktop with the following ArcWeb Services:

- Perform multipoint routing with driving directions.
- Find named places and display them on a map including geographic regions, bodies of water, and major points of interest (POI).
- Find addresses and display them on a map.
- Locate POI using different proximity parameters. Your POI can be uploaded to ESRI-hosted servers and spatially enabled for proximity searches.
- Perform queries on the data accessed through ArcWeb Services (such as census and flood statistics for a specified location).

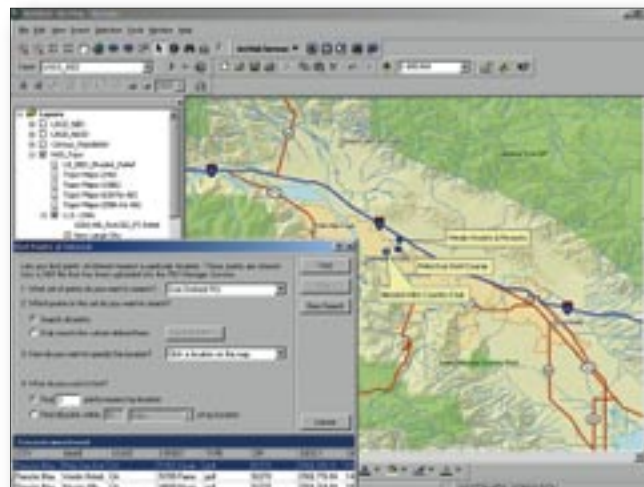

## Evaluate ArcWeb USA

Find out how Web services can change the way you use GIS. We invite you to try a free 30-day evaluation of ArcWeb USA so you can see how ArcWeb Services can enhance your ArcGIS projects with content-rich, up-to-date data and services.

To register for your free evaluation, visit [www.esri.com/arcwebusa](http://www.esri.com/arcwebusa).
